
New UI Widgets Documentation

Release 1.14.2f1

Ilia Novikov

Jun 10, 2021

CONTENTS

1	Overview	1
1.1	Recommended Unity UI documentation	1
1.2	Collections	1
1.3	Containers	2
1.4	Dialogs	2
1.5	Input	2
1.6	Misc	3
2	Widgets Generation	5
2.1	Requirements	6
2.2	Supported types	6
2.3	Limitations	6
2.4	Known Problems	6
2.5	INotifyPropertyChanged Support	7
2.6	Replacing generated code	8
2.6.1	Collections	8
2.6.2	Autocomplete	11
3	Widgets	13
3.1	Collections	13
3.1.1	AutoCombobox	13
3.1.2	Combobox	13
3.1.3	DirectoryTreeView	14
3.1.4	FileListView	15
3.1.5	Grouped ListView, TileView and Table	16
3.1.6	ListView, TileView and Table	17
3.1.7	TreeGraph	30
3.1.8	TreeView	31
3.2	Containers	35
3.2.1	Accordion	35
3.2.2	Tabs	37
3.3	Controls	38
3.3.1	Context Menu	38
3.3.2	Paginator	40
3.3.3	Sidebar	42
3.3.4	SplitButton	43
3.4	Dialogs	43
3.4.1	DatePicker, DateTimePicker, TimePicker	44
3.4.2	Dialog	45
3.4.3	FileDialog	49

3.4.4	FolderDialog	52
3.4.5	Notifications	53
3.4.6	Pickers	58
3.4.7	Popup	59
3.5	Input	60
3.5.1	Autocomplete	60
3.5.2	Calendar	62
3.5.3	Centered Slider	64
3.5.4	Circular Slider	65
3.5.5	ColorPicker	66
3.5.6	DateTime	66
3.5.7	DateScroller, DateTimeScroller, TimeScroller	67
3.5.8	RangeSlider	71
3.5.9	Scale	72
3.5.10	Spinner	74
3.5.11	Time	76
3.5.12	TimeAnalog	77
3.6	Miscellaneous	78
3.6.1	ProgressbarDeterminate	78
3.6.2	ProgressbarIndeterminate	80
4	Components	81
4.1	Bring to Front	81
4.1.1	Options	81
4.2	Single Line and Multi Line Connectors	81
4.2.1	SingleConnector Options	81
4.2.2	MultipleConnector Options	82
4.2.3	Connector Line	82
4.2.4	ILineBuilder	82
4.3	Distance Lines	82
4.3.1	Options	84
4.4	Drag and Drop components	84
4.4.1	Drag-and-Drop Support for the Collections	84
4.4.2	Collections Drag Options	84
4.4.3	Collections Drop Options	85
4.4.4	TreeView Drop Options	86
4.4.5	TreeView Node Drop Options	86
4.4.6	Custom Drag Support	86
4.4.7	Custom Drop Support	89
4.4.8	Swapping content between Drag and Drop components	91
4.4.9	Adding limitations to the Drop component	92
4.5	Draggable	92
4.5.1	Options	92
4.5.2	Properties	93
4.5.3	Events	93
4.6	EasyLayout	93
4.6.1	Options	93
4.6.2	Events	97
4.7	Groupable	97
4.7.1	Options	97
4.7.2	Events	98
4.8	Layout Switcher	98
4.8.1	Options	98
4.8.2	Events	98

4.9	Lightbox	99
4.10	ListViewAutoResize	99
4.10.1	Options	99
4.11	Object Sliding	99
4.11.1	Options	99
4.11.2	Helper components	100
4.12	Pinchable	100
4.12.1	Options	100
4.12.2	Events	100
4.13	Resizable	101
4.13.1	Options	101
4.13.2	Events	102
4.13.3	Properties	102
4.13.4	Resize Children With Parent	102
4.14	Resizable Handles	102
4.14.1	Options	102
4.14.2	Events	103
4.15	Rotatable	103
4.15.1	Options	103
4.15.2	Events	104
4.15.3	Properties	105
4.16	Rotatable Handle	105
4.16.1	Options	105
4.16.2	Events	105
4.17	Scrollbar Min Size	105
4.17.1	Options	106
4.18	ScrollRect Events	106
4.18.1	Options	106
4.18.2	Events	106
4.19	ScrollRect Footer	106
4.19.1	Options	106
4.20	ScrollRect Header	107
4.20.1	Options	107
4.21	Selectable Helper	107
4.22	Splitter	108
4.22.1	Options	108
4.22.2	Events	108
4.23	Switch Group	108
4.23.1	Options	109
4.24	Table Header	109
4.24.1	Options	109
4.24.2	Cet Current Columns Order	109
4.24.3	Change Columns Order	110
4.24.4	Restore Original Columns Order	110
4.24.5	Disable Column	110
4.24.6	Enable Column	110
4.25	Tooltip	110
4.25.1	Options	111
4.25.2	Events	111
4.26	TreeView data source	111
5	Effects	113
5.1	Flare Effect	113
5.1.1	Options	113

5.2	Ring Effect	113
5.2.1	Options	114
5.3	Ripple Effect	114
5.3.1	Options	114
5.4	Tsunami Effect	114
5.4.1	Options	115
6	Shaders	117
6.1	Gradient Shaders	117
7	Styles (Skins)	119
7.1	Style support for the custom widgets	120
8	Integration	121
8.1	Cursor	121
8.1.1	Fields	121
8.1.2	Methods	121
8.2	Localization	122
8.2.1	Dialog, Popup Localization	122
8.2.2	Notify Localization	123
8.2.3	Generated Widgets	123
8.3	String Comparison and Culture	124
8.4	Timer and Animations	124
9	Data Bind for Unity Support	125
10	TextMeshPro Support	127
10.1	Details	127
11	TextMeshPro Converter	129
11.1	Modify Code to Adapters	130
12	I2 Localization Support	133
13	Known Problems	135
14	Support	137
15	Changelog	139
15.1	Release 1.14.2	139
15.2	Release 1.14.1	140
15.3	Release 1.14.0	140
15.4	Release 1.12.6	141
15.5	Release 1.12.5	141
15.6	Release 1.12.4	141
15.7	Release 1.12.3	142
15.8	Release 1.12.2	142
15.9	Release 1.12.1	142
15.10	Release 1.11.2	143
15.11	Release 1.11.1	144
15.12	Release 1.11.0	144
15.13	Release 1.10.4	144
15.14	Release 1.10.3	145
15.15	Release 1.10.2	145
15.16	Release 1.10.1	146
15.17	Release 1.10.0	147

15.18 Release 1.9.3	148
15.19 Release 1.9.2	148
15.20 Release 1.9.1	149
15.21 Release 1.9.0	149
15.22 Release 1.8.5	150
15.23 Release 1.8.4	151
15.24 Release 1.8.3	151
15.25 Release 1.8.2	151
15.26 Release 1.8.0	152
15.27 Release 1.7.4	152
15.28 Release 1.7.2	153
15.29 Release 1.7.0	153
15.30 Release 1.6.5	153
15.31 Release 1.6.0	154
15.32 Release 1.5.0	154
15.33 Release 1.4.2	155
15.34 Release 1.4.1	155
15.35 Release 1.4	155
15.36 Release 1.3	155
15.37 Release 1.2	155
15.38 Release 1.1	155
15.39 Release 1.0	156

OVERVIEW

Most of the widgets can be used without knowledge of the Unity UI, but some of them require a basic understanding of the Unity UI.

1.1 Recommended Unity UI documentation

- [Canvas](#)
- [RectTransform](#)
- [Events and Event Triggers](#)
- [Mask](#)
- [Transitions](#)
- [Layout Groups](#)

1.2 Collections

Collections for your custom types can be created with *Widgets Generation*.

TileView, Table, TreeGraph does not have default implementation like ListView because of no standard for those widgets, so they should be created with *Widgets Generation*.

- **Combobox** Data type `string`.
- **ComboboxIcons**
- **ComboboxIconsMultiselect** ComboboxIcons with multiple selection support.
- **DirectoryTreeView** *
- **FileListView** *
- **ListView** Data type `string`.
- **ListViewColors** Data type `Color`.
- **ListViewInt** Data type `int`.
- **ListViewIcons**
- **ListViewHeight** Data type `string`.
- **ListViewPaginator** Paginator for ListView, TileView, and Table.
- **TreeView**

1.3 Containers

- **Accordion**
- **Tabs** Tabs buttons displayed on the top side.
- **TabsLeft** Tabs buttons displayed on the left side.
- **TabsIcons** Tabs buttons with an icon and buttons displayed on the top side.
- **TabsIconsLeft** Tabs buttons with an icon and displayed on the left side.

1.4 Dialogs

- **DatePicker** Data type `DateTime`.
- **DateTimePicker** Data type `DateTime`.
- **Dialog Template** Template for the custom dialogs.
- **FileDialog** *
- **FolderDialog** *
- **NotifyTemplate** Template for the custom notifications.
- **PickerBool** Data type `bool`.
- **PickerIcons**
- **PickerInt** Data type `int`.
- **PickerString** Data type `string`.
- **Popup** Template for the custom popup.
- **TimePicker** Data type `TimeSpan`.

1.5 Input

- **Autocomplete** Data type `string`.
- **AutocompleteIcons**
- **ButtonBig**
- **ButtonSmall**
- **Calendar**
- **CenteredSlider** Horizontal direction.
- **CenteredSliderVertical** Vertical direction.
- **ColorPicker**
- **ColorPickerRange**
- **ColorPickerRangeHSV**
- **ColorsList** Should be used with **ColorPicker** to save colors.
- **DateTime** Data type `DateTime`.

- **RangeSlider** Data type `int`. Horizontal direction.
- **RangeSliderVertical** Data type `int`. Vertical direction.
- **RangeSliderFloat** Data type `float`. Horizontal direction.
- **RangeSliderFloatVertical** Data type `float`. Vertical direction.
- **Spinner** Data type `int`.
- **SpinnerFloat** Data type `float`.
- **Switch**
- **Time12** Data type `TimeSpan`. 12-hour format with AM / PM switch.
- **Time24** Data type `TimeSpan`. 24-hour format.

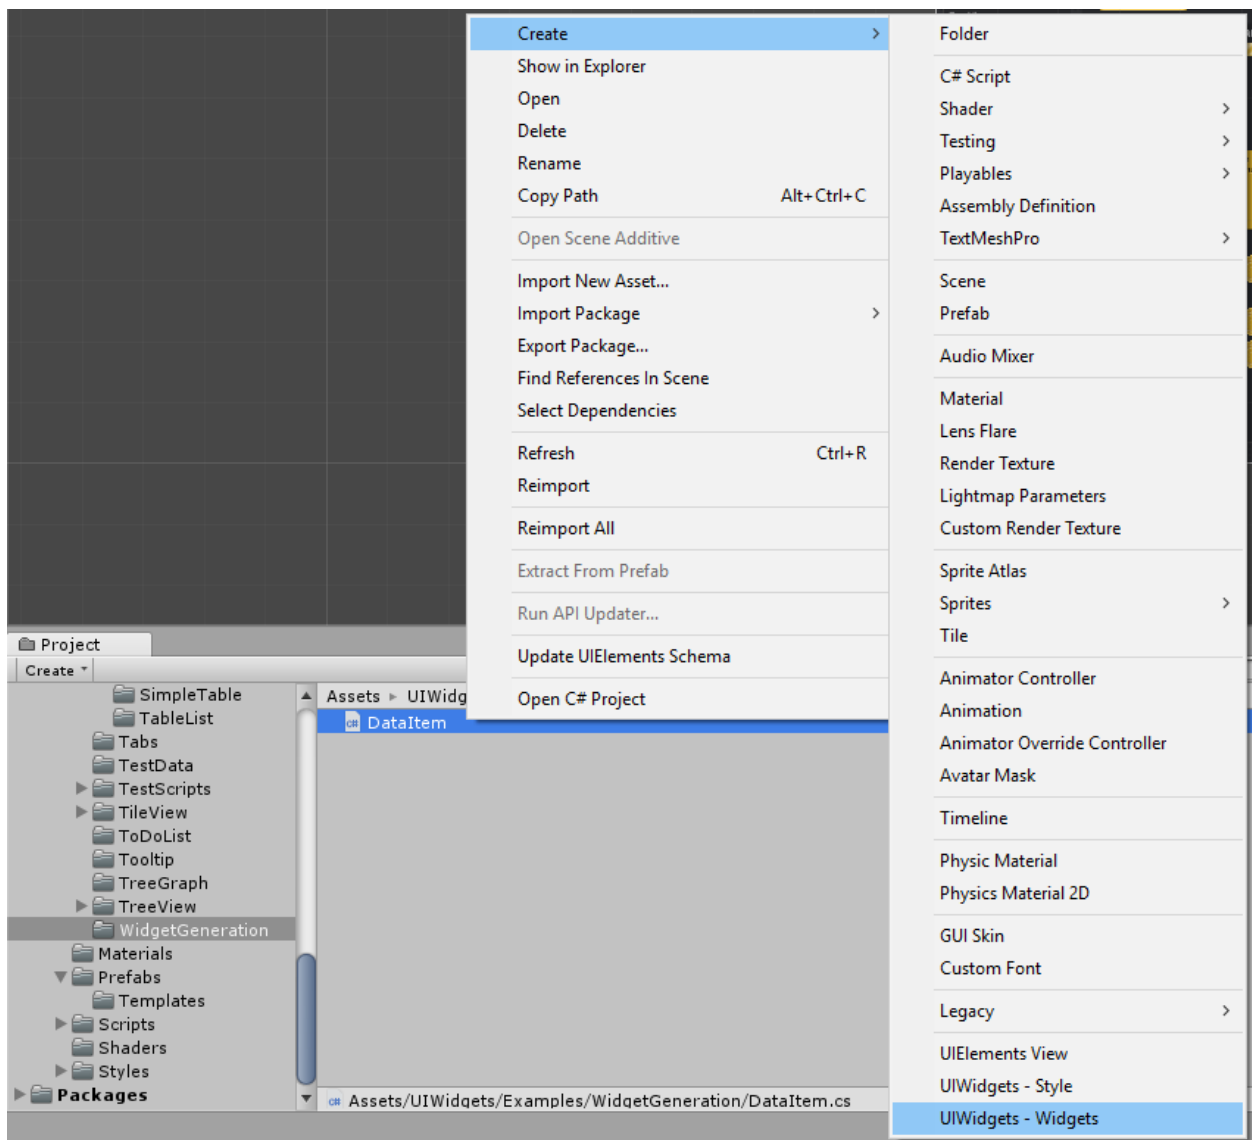

1.6 Misc

- **AudioPlayer**
- **ProgressbarDeterminate**
- **ProgressbarIndeterminate**
- **ScrollRectPaginator**
- **ScrollRectNumericPaginator**

* not available on platforms with restricted access to file system (like WebGL and UWP).

WIDGETS GENERATION

You can generate widgets for your data type with *Context menu / Create / New UI Widgets / Generate Widgets*.

2.1 Requirements

Data type should have at least one public field or public readable property of the supported types.

To be available in the inspector window data type should have `[System.Serializable]` attribute.

2.2 Supported types

Text types (`string` or types convertible to the `string`):

- `string`
- numeric data types (`int`, `float`, etc)
- any type with overridden `ToString()` method and not derived from `UnityEngine.Object`.

Graphic types:

- `Sprite`
- `Texture2D`
- `Color`
- `Color32`

2.3 Limitations

- Autocomplete
 - Requires at least one field or property of the `string` type.
- Table
 - Requires at least one field or property of the text type.

2.4 Known Problems

Widget generation does not work with `struct` or `interface` types inside a namespace with some Unity versions due to [bug](#).

Workaround

Specify the type name in the *Data Type* field.

Another way is to change `interface` or `struct` to `class` in the type definition. Then run widgets generation and return type to `interface` or `struct`.

2.5 INotifyPropertyChanged Support

ObservableList<T> used by widgets provide support for INotifyPropertyChanged interface of the data type, so if property updated and was raised PropertyChanged event then widget will be updated.

If you want to automatically update collections widgets (like ListView, TileView, Table) on item data changes, then you need to add INotifyPropertyChanged implementation to your data type.

Implementation can be added even after widgets generation.

```
public class ListViewIconsItemDescription : INotifyPropertyChanged
{
    [SerializeField]
    string name;

    public string Name
    {
        get
        {
            return name;
        }

        set
        {
            name = value;
            Changed("Name");
        }
    }

    public event PropertyChangedEventHandler PropertyChanged = (x, y) => { };

    protected void Changed(string propertyName)
    {
        PropertyChanged(this, new PropertyChangedEventArgs(propertyName));
    }

    ...
}
```

This way name of the first item displayed with the widget will be changed:

```
ListView.DataSource[0].Name = "New name";
```

You can disable this behavior with ObserveItems property:

```
ListView.DataSource.ObserveItems = false;
// name displayed with the widget will be not changed
ListView.DataSource[0].Name = "New name";
```

2.6 Replacing generated code

Generated code can be freely modified.

Important: Be careful not to overwrite modified scripts if you decide re-run widget generation.

2.6.1 Collections

Widgets to display collections consist of the three classes:

- your custom data type (class, struct or interface)
- Widget class (required because of the generic components not allowed)
- DefaultItem class to control tile view

Widget and DefaultItem classes created with widget generation for your type and you will need only to modify created DefaultItem class if it needs at all.

Functions to modify in the DefaultItem class:

- SetData() to display passed data. Called when the item displayed or recycled.
- MovedToCache() to unload unused resources like *Sprite*. Called when the item is out of sight and not be displayed or recycled (can happen when items list cleared).

For example you can replace default widgets used to display item fields with other widgets.

This example show Item.Number field displayed with Spinner instead of Text and field value update with Spinner changes.

Original code:

```
namespace UIWidgets.Examples.WidgetGeneration.Widgets
{
    /// <summary>
    /// ListView component for the DataItem.
    /// </summary>
    public class ListViewComponentDataItem : UIWidgets.ListViewItem,
        UIWidgets.IResizableItem,
        UIWidgets.IViewData<UIWidgets.Examples.WidgetGeneration.DataItem>
    {
        ...

        /// <summary>
        /// The Number.
        /// </summary>
        public UIWidgets.TextAdapter Number;

        ...

        /// <summary>
        /// Gets the current item.
        /// </summary>
        public UIWidgets.Examples.WidgetGeneration.DataItem Item
        {
            get;
```

(continues on next page)

(continued from previous page)

```

        protected set;
    }

    /// <summary>
    /// Sets component data with specified item.
    /// </summary>
    /// <param name="item">Item.</param>
    public virtual void SetData(UIWidgets.Examples.WidgetGeneration.DataItem item)
    {
        Item = item;

        if (Number != null)
        {
            Number.text = Item.Number.ToString();
        }

        ...
    }

    ...
}

```

New code:

```

namespace UIWidgets.Examples.WidgetGeneration.Widgets
{
    /// <summary>
    /// ListView component for the DataItem.
    /// </summary>
    public class ListViewComponentDataItem : UIWidgets.ListViewItem,
        UIWidgets.IResizableItem,
        UIWidgets.IViewData<UIWidgets.Examples.WidgetGeneration.DataItem>
    {
        ...

        /// <summary>
        /// The Number.
        /// </summary>
        public UIWidgets.Spinner Number;

        ...

        /// <summary>
        /// Gets the current item.
        /// </summary>
        public UIWidgets.Examples.WidgetGeneration.DataItem Item
        {
            get;
            protected set;
        }

        /// <summary>
        /// Add callbacks.
        /// </summary>
        protected override void Start()
        {

```

(continues on next page)

(continued from previous page)

```

        base.Start();

        if (Number != null)
        {
            Number.onValueChangedInt.AddListener(UpdateNumber);
        }
    }

    /// <summary>
    /// Update Item.Number when spinner value changed.
    /// </summary>
    void UpdateNumber(int value)
    {
        Item.Number = value;
    }

    /// <summary>
    /// Sets component data with specified item.
    /// </summary>
    /// <param name="item">Item.</param>
    public virtual void SetData(UIWidgets.Examples.WidgetGeneration.DataItem item)
    {
        Item = item;

        if (Number != null)
        {
            Number.Value = Item.Number;
        }

        ...
    }

    /// <summary>
    /// Remove callbacks.
    /// </summary>
    protected override void OnDestroy()
    {
        if (Number != null)
        {
            Number.onValueChangedInt.RemoveListener(UpdateNumber);
        }

        base.OnDestroy();
    }

    ...
}

```

If you need to dynamically change the state of the objects like enabling or disabling them and restore state after item recycled then this can be done with *SetData* function:

```

public virtual void SetData(UIWidgets.Examples.WidgetGeneration.DataItem item)
{
    Item = item;
}

```

(continues on next page)

(continued from previous page)

```
// set state after item recycled
ToggableObject.SetActive(item.IsToggableObjectActive);

...
}
```

2.6.2 Autocomplete

You can override Startswith, Contains, and GetStringValue functions to use different field or use other match condition.

This example show Text field replaced with SomeOtherText field and match with EndsWith instead of Contains.

Original code:

```
namespace UIWidgets.Examples.WidgetGeneration.Widgets
{
    /// <summary>
    /// Autocomplete for the DataItem.
    /// </summary>
    public class AutocompleteDataItem : UIWidgets.AutoCompleteCustom<UIWidgets.
↳ Examples.WidgetGeneration.DataItem,
        ListViewComponentDataItem, ListViewDataItem>
    {
        ...
        /// <summary>
        /// Returns a value indicating whether Input occurs within specified value.
        /// </summary>
        /// <param name="value">Value.</param>
        /// <returns>true if the Input occurs within value parameter; otherwise, false.
↳ </returns>
        public override bool Contains(UIWidgets.Examples.WidgetGeneration.DataItem_
↳ value)
        {
            if (CaseSensitive)
            {
                return value.Text.Contains(Query);
            }

            return value.Text.ToLower().Contains(Query.ToLower());
        }
    }
}
```

New code:

```
namespace UIWidgets.Examples.WidgetGeneration.Widgets
{
    /// <summary>
    /// Autocomplete for the DataItem.
    /// </summary>
    public class AutocompleteDataItem : UIWidgets.AutoCompleteCustom<UIWidgets.
↳ Examples.WidgetGeneration.DataItem,
        ListViewComponentDataItem, ListViewDataItem>
    {
```

(continues on next page)

(continued from previous page)

```
...
/// <summary>
/// Returns a value indicating whether Input occurs within specified value.
/// </summary>
/// <param name="value">Value.</param>
/// <returns>true if the Input occurs within value parameter; otherwise, false.
↪</returns>
public override bool Contains(UIWidgets.Examples.WidgetGeneration.DataItem_
↪value)
{
    if (CaseSensitive)
    {
        return value.SomeOtherText.EndsWith(Query);
    }

    return value.SomeOtherText.ToLower().EndsWith(Query.ToLower());
}
}
```

3.1 Collections

3.1.1 AutoCombobox

Combobox widget combined with Autocomplete widget which allows select item by typing.

Options

- Autocomplete `TAutocomplete`
ListView with items.
- Combobox `TCombobox`
Button to show and hide ListView on click.
- AddItems `bool`
Create a new item and add it to list if item not found with specified input. Requires overridden `TItem` `Input2Item(string input)` method.

3.1.2 Combobox

Combobox is wrapper for `ListView`, so you should mostly use *ListView properties and events*.

Also available `AutocompleteCombobox`, this is Autocomplete with Combobox-like behavior.

Options

- ListView `TListViewCustom`
ListView with items.
- ToggleButton `Button`
Button to show and hide ListView on click.
- Current `TComponent`
Template to display selected items.
- HideAfterItemToggle `bool`
Hide ListView right after item selected or deselected.

Events

- `OnShowListView` `UnityEvent`
The event raised when `ListView` showed.
- `OnHideListView` `UnityEvent`
The event raised when `ListView` hidden.
- `OnCurrentClick` `UnityEvent<int, TItem>`
The event raised on click on displayed selected item.

3.1.3 DirectoryTreeView

- All collections widgets support virtualization: gameobjects created only for the visible items.
- Add `Selectable` component to use keyboard and gamepad navigation.
- See also [*FolderDialog*](#).

Options

Options are almost same as the [*TreeView*](#).

- Data Source `ObservableList<TreeNode<FileSystemEntry>>`
Not available in the inspector window.
Filled automatically.
- Root Directory `string`
Root directory.
- Exceptions View `IOExceptionsView`
Special component to display IO errors.

Methods

- `TreeNode<FileSystemEntry> ExpandPath(string path, bool scrollToNode = true)`
Expand nodes to the specified path. Returns `null` if node not found.
- `TreeNode<FileSystemEntry> Path2Node(string path)`
Get node of the specified path. Returns `null` if node not found.
- `TreeNode<FileSystemEntry> Path2NearestNode(string path)`
Get exact node or nearest existing parent node of the specified path.
- `void RefreshDirectories()`
Refresh displayed directories according to current state of the file system.

3.1.4 FileListView

- All collections widgets support virtualization: gameobjects created only for the visible items.
- Add `Selectable` component to use keyboard and gamepad navigation.
- See also *FileDialog*.

Options

Options are almost same as the *ListView*, *TileView* and *Table*.

- Data Source `ObservableList<FileSystemEntry>`
Not available in the inspector window.
Filled automatically.
- Current Directory `string`
Current directory. `Application.persistentDataPath` will be used if not specified.
- Directory Patterns `string`
Directory patterns, semicolon used as separator between patterns.
Directory will be displayed if it's match one of the pattern.
Wildcards:
* - Zero or more characters in that position.
? - Zero or one character in that position.
Warning: if directory match two or more patterns it will be displayed two or more times.
- File Patterns `string`
File patterns, semicolon used as separator between patterns.
File will be displayed if it's match one of the pattern.
Wildcards:
* - Zero or more characters in that position.
? - Zero or one character in that position.
Warning: if file match two or more patterns it will be displayed two or more times.
- Button Up `Button`
Button to open parent directory of current directory.
- Button Toggle Drivers `Button`
Button to toggle `DriversList`.
- Path View `FileListViewPath`
Widget to display the current directory.
- Drives List View `DrivesListView`
Widget to display drives list.
- Exceptions View `IOExceptionsView`
Special component to display IO errors.
- Can Display Entry `Func<FileSystemEntry, bool>`
Not available in the inspector window.

Function to check if `FileSystemEntry` should be displayed.

3.1.5 Grouped ListView, TileView and Table

You can create grouped `ListView` with `GroupedList<TItem>` class.

```
public class GroupedItem
{
    public string Name;
    public bool IsGroup = false;
}

public class GroupedItems : GroupedList<GroupedItem>
{
    /// <summary>
    /// Get group for specified item.
    /// </summary>
    /// <param name="item">Item.</param>
    /// <returns>Group for specified item.</returns>
    protected override GroupedItem GetGroup(GroupedItem item)
    {
        var name = item.Name.Length > 0 ? item.Name[0].ToString() : string.Empty;

        foreach (var key in GroupsWithItems.Keys)
        {
            if (key.Name == name)
            {
                return key;
            }
        }

        return new GroupedItem() { Name = name, IsGroup = true, };
    }
}

public class GroupedView : ListViewCustom<GroupedListViewComponent, GroupedItem>
{
    // GroupedData used to add and remove items instead of the DataSource.
    public GroupedItems GroupedData = new GroupedItems();

    bool isGroupedViewInited;

    public override void Init()
    {
        if (isGroupedViewInited)
        {
            return;
        }

        isGroupedViewInited = true;

        base.Init();

        GroupedData.GroupComparison = (x, y) => x.Name.CompareTo(y.Name);
        GroupedData.Data = DataSource;

        CanSelect = index => !DataSource[index].IsGroup;
    }
}
```

(continues on next page)

(continued from previous page)

```
}  
}
```

3.1.6 ListView, TileView and Table

- All collections widgets support virtualization: gameobjects created only for the visible items.
- Different ListView, TileView and Table can display the same list.
- *Table Header* provides Table specific methods.
- In most cases *ToggleGroup* and *SwitchGroup* components used by widgets under *DefaultItem* hierarchy should be placed outside *DefaultItem* gameobject. And on value changed callbacks should process all items, not only the current one, since invisible items do not receive callbacks because of the virtualization.

List View Type

Fig. 1: ListView with Fixed Size.

Fig. 2: ListView with Variable Size.

Fig. 3: ListView with Ellipse layout.

Fig. 4: TileView with Fixed Size.

Fig. 5: TileView with Variable Size.

ListView.Container settings for the Ellipse type

- **RectTransform.pivot** Defines on which side or corner will be the center point.
- **EasyLayout.Ellipse settings** Width and height usually should be specified, set the same value for the circle.
- **Angle Start** Base rotation for the first item.
- **Angle Step Auto** Should be disabled.
- **Angle Step** Angular distance between items.
- **Fill** Should be `ARC`.
- **Arc Length** Should be **180** if center at the side and **90** if center at the corner.

Options

- **Interactable** `bool`
Allow users interact with the ListView.
- **Virtualization** `bool`
Enable virtualization. If enabled `GameObject` instantiated only for the visible items; otherwise for the all items.
- **List Type** `ListViewType`
Determines how items are displayed.
 - `ListViewWithFixedSize`
Works with EasyLayout, Horizontal Layout Group and Vertical Layout Group.

Fig. 6: TileView Staggered.

- ListViewWithVariableSize
 - Works with EasyLayout, Horizontal Layout Group and Vertical Layout Group.
- ListViewEllipse
 - Works with EasyLayout.
- TileViewWithFixedSize
 - Works with EasyLayout.
- TileViewWithVariableSize
 - Works with EasyLayout.
- TileViewStaggered
 - Works with EasyLayout.
- Sort bool *deprecated*
 - If enabled items will be sorted with **SortFunc**. Deprecated, replaced with DataSource.Comparer.
- SortFunc Func<IEnumerable<TItem>, IEnumerable<TItem>> *deprecated*
 - Not available in the Inspector window* Function to sort items. Deprecated, replaced with **Data-Source.Comparer**.
- Data Source ObservableList<TItem>
 - List of the items. It works the same way as List<T> with some additions.
 - Not available in the inspector window if type not specified as serializable.
- Multiple Select bool
 - Allow to select multiple items, otherwise only one.
- SelectedIndex int
 - Index of the last selected item.
- SelectedIndices List<int>
 - Not available in the Inspector window* List of the selected items indices.
- SelectedItem TItem
 - Not available in the Inspector window* Last selected item.
- SelectedItems List<TItem>
 - Not available in the Inspector window* List of the selected items.
- Direction ListViewDirection
 - ListView direction.
 - Horizontal
 - Vertical
- DefaultItem TComponent
 - A prefab used to display item.
- Container Transform
 - The container of the instantiated gameobjects used to display items. Should have layout required for the specified List Type.

- `ScrollRect ScrollRect`

ScrollRect used by ListView. Required for virtualization support.
- `AllowColoring bool`

Change colors of the highlighted and selected items.
- `Colors`

Colors for the text and background elements of the **DefaultItem** instances.

Text and background elements defined with **GraphicsForeground** and **GraphicsBackground** properties of the `TComponent`.

 - `Default Color Color`
 - `Default Background Color Color`
 - `Highlighted Color Color`
 - `Highlighted Background Color Color`
 - `Selected Color Color`
 - `Selected Background Color Color`
 - `Disabled Color Color`: multiplier, actual color is current color (default, highlighted, selected) * disabled Color.
- `Fade Duration float`

Time for a smooth color change when the state of an element changes.
- `End Scroll Delay float`

Delay from last scroll event to **OnEndScrolling** event raising.
- `Navigation bool`

Allow to use navigation with keyboard or gamepad.
- `Looped List bool`

Is list looped? First items will be displayed after the last item and scrolling scrolling are infinite. Recommended to disable scrollbar.
- `Is Table bool`

Is ListView will be displayed as a table? Used for correct styles support.
- `Set Content Size Fitter bool`

Changes `ContentSizeFitter` settings according to the selected direction. Disable if you want to use manual settings.
- `Scroll Unscaled Time bool`

`ScrollTo` functions will be used unscaled time.
- `Scroll Movement AnimationCurve`

Animation curve for the `ScrollTo` functions.
- `Center The Items bool`

Display items at the center of the list if items not enough to fill the list.
- `Precalculate Item Size bool`

Precalculate items sizes for List Type with items of variable size.

You can disable this option to increase performance in exchange to less accurate scrolling.

- Auto Scroll Area `float`

ListView will be automatically scrolled if the pointer is less than a specified distance from the border during drag&drop.

- Auto Scroll Speed `float`

Speed of auto-scroll.

- CanSelect Func<int, bool>

The function that determines whether the item with the specified index can be selected. Unselectable items cannot be highlighted and skipped by keyboard and gamepad navigation.

- CanDeselect Func<int, bool>

The function that determines whether the item with the specified index can be deselected.

Events

- OnSelect UnityEvent<int, ListViewItem>

The event raised when item selected.

Arguments: index of the selected item and DefaultItem instance for the selected item.

- OnDeselect UnityEvent<int, ListViewItem>

The event raised when item deselected.

Arguments: index of the deselected item and DefaultItem instance for the deselected item.

- OnSelectObject UnityEvent<int>

The event raised when item selected.

Arguments: index of the selected item.

- OnDeselectObject UnityEvent<int>

The event raised when item deselected.

Arguments: index of the deselected item.

- OnStartScrolling UnityEvent

The event raised when scrolling starts.

- OnEndScrolling UnityEvent

The event raised when after **End Scroll Delay** from last scroll event.

- onSubmit UnityEvent

The event raised when ListView gameobject has been selected via a “submit” key you specify (default is the return key).

- onCancel UnityEvent

The event raised when ListView gameobject has been deselected.

- onItemSelect UnityEvent

The event raised when ListView item gameobject has been selected via a “submit” key you specify (default is the return key).

- `onItemCancel UnityEvent`

The event raised when ListView item gameobject has been deselected.

- `OnUpdateView UnityEvent`

The event raised when ListView view was updated.

- `OnFocusIn UnityEvent<BaseEventData>`

The event raised when ListView gameobject received focus.

- `OnFocusOut UnityEvent<BaseEventData>`

The event raised when ListView gameobject lost focus.

- `OnPointerEnterObject UnityEvent<int>`

The event raised when pointer entered on ListView item gameobject.

Arguments: index of the item.

- `OnPointerExitObject UnityEvent<int>`

The event raised when pointer exited on ListView item gameobject.

Arguments: index of the item.

- `OnDataSourceChanged UnityEvent<ListViewCustom<TComponent, TItem>>`

The event raised when DataSource replaced with the new list.

Arguments: ListView instance.

Items Events

It is `ListView.ItemsEvents` field with list of items events. First argument is item index, second is item component instance, third is event data.

- `PointerClick UnityEvent<int, ListViewItem, PointerEventData>`

The event raised on every pointer click on item component.

- `FirstClick UnityEvent<int, ListViewItem, PointerEventData>`

The event raised on first pointer click with left mouse button on item component.

- `DoubleClick UnityEvent<int, ListViewItem, PointerEventData>`

The event raised on second pointer click with left mouse button on item component.

- `PointerUp UnityEvent<int, ListViewItem, PointerEventData>`

The event raised on pointer up on item component.

- `PointerDown UnityEvent<int, ListViewItem, PointerEventData>`

The event raised on pointer down on item component.

- `PointerEnter UnityEvent<int, ListViewItem, PointerEventData>`

The event raised on pointer enter on item component.

- `PointerExit UnityEvent<int, ListViewItem, PointerEventData>`

The event raised on pointer exit on item component.

- `Move UnityEvent<int, ListViewItem, AxisEventData>`
The event raised on move with keyboard or gamepad on item component.
- `Submit UnityEvent<int, ListViewItem, BaseEventData>`
The event raised on submit on item component.
- `Cancel UnityEvent<int, ListViewItem, BaseEventData>`
The event raised on cancel on item component.
- `Select UnityEvent<int, ListViewItem, BaseEventData>`
The event raised when item component has been selected by EventSystem.
- `Deselect UnityEvent<int, ListViewItem, BaseEventData>`
The event raised when item component has been deselected by EventSystem.
- `Resize UnityEvent<int, ListViewItem, Vector2>`
The event raised when item component size was changed.

ListViewComponent Class

Component to display item.

Fields and properties

- `Index int`
Index of the displayed item. Negative if item not displayed or not used by ListView.
- `Owner ListViewBase`
Reference to ListView.
- `GraphicsForeground Graphic[]`
References to the foreground objects like Text.
- `GraphicsBackground Graphic[]`
References to the background objects.

Methods

- `SetData(TItem item)`
Set data.
- `GraphicsColoring(Color foregroundColor, Color backgroundColor, float fadeDuration)`
Called by ListView to set colors for the GraphicsForeground and GraphicsBackground.
- `MovedToCache()`
Called by ListView when GameObject moved to cache or recycled.
- `StateDefault()`
Called by ListView when item in the default state.
- `StateSelected()`
Called by ListView when item selected.
- `StateHighlighted()`

Called by ListView when item highlighted.

Auto-Resize DefaultItem instances on ListView Resize Maintaing Aspect Ratio

- DefaultItem.RectTransform anchors should be set to the horizontal or vertical stretch depending on ListView.Direction
- Add Aspect Ratio Fitter to the DefaultItem and set Aspect Mode = Width Controls Height or Height Controls Width depending on ListView.Direction
- Change ListView.ListType to List View With Variable Size or Tile View With Variable Size
- Make sure that ListView.Container.EasyLayout children size set to Do Nothing.

Add Item

```
var new_item = new ListViewIconsItemDescription()
{
    Icon = sampleIcon,
    Name = "test item",
};
listView.DataSource.Add(new_item);
```

Get Items

```
var items = listView.DataSource;
```

Set Items

```
var items = new ObservableList<ListViewIconsItemDescription>();
listView.DataSource = items;

var items2 = new List<ListViewIconsItemDescription>();
listView.DataSource = items2.ToObservableList();
```

Display Same List with ListView, TileView or Table

```
var items = new ObservableList<ListViewIconsItemDescription>();
listView.DataSource = items;
tileView.DataSource = items;
table.DataSource = items;
```

Get Last Selected Index

```
Debug.Log(listView.SelectedIndex);
```

Get Selected Indices

```
var indices = listView.SelectedIndices;  
Debug.Log(string.Join(", ", indices.ConvertAll(x => x.ToString()).ToArray()));
```

Last Selected Item

```
Debug.Log(listView.SelectedItem.Name);
```

Get Selected Items

```
var selected_items = listView.SelectedItems;  
Debug.Log(string.Join(", ", selected_items.ConvertAll(x => x.Name).ToArray()));
```

Delete Specified Item

```
listView.DataSource.Remove(items[0]);
```

Delete Item by Index

```
listView.DataSource.RemoveAt(0);
```

Clear List

```
listView.DataSource.Clear();
```

Add Items

```
var new_items = new List<ListViewIconsItemDescription>()  
{  
    new_item,  
    new_item,  
    new_item,  
};  
listView.DataSource.AddRange(new_items);
```

Optimization

```
// Use BeginUpdate() and EndUpdate() to keep widget from updating on each change.
// All changes after BeginUpdate() call will be displayed with EndUpdate() call.
var items = listView.DataSource;
items.BeginUpdate();

items.Clear();
items.Add(new_item);
items.Add(new_item);
items.Add(new_item);
items.AddRange(new_items);
items.RemoveAt(0);

// widget will be updated after EndUpdate() call
items.EndUpdate();
```

Replace Item

```
listView.DataSource[0] = new ListViewIconsItemDescription()
{
    Name = "new item"
};
```

Sort

```
// Sort by LocalizedName or Name in ascending order
Comparison<ListViewIconsItemDescription> ItemsComparisonAsc = (x, y) => x.Name.
    <CompareTo(y.Name);

// sort by LocalizedName or Name in descending order
Comparison<ListViewIconsItemDescription> ItemsComparisonDesc = (x, y) => -(x.Name).
    <CompareTo(y.Name);

// sort items only once
items.Sort(ItemsComparisonAsc);
```

Enable Permanent Sort

```
items.Comparison = ItemsComparisonDesc;
```

Important: Items will be always sorted, but if you use `.BeginUpdate()` then items will be re-sorted only after `.EndUpdate()` call.

Disable Permanent Sort

```
items.Comparison = null;
```

Set Selected Index

```
listView.SelectedIndex = 1;
```

Or:

```
listView.Select(1);
```

Behavior is different if you enable `MultipleSelect`:

- `listView.SelectedIndex = 1` last selected item will be deselected and specified item will be selected.
- `listView.Select(1)` new item will be added to selected items.

Deselect

```
listView.SelectedIndex = -1;
```

Or:

```
listView.Deselect(1);
```

Adding Callbacks to Custom Events of the Components

```
public class YourListView : ListViewCustom<YourListViewItemComponent,
↳YourListViewItem>
{
    protected override void AddCallback(ListViewItem item)
    {
        base.AddCallback(item);
        item.onDoubleClick.AddListener(ProcessDoubleClick);
    }

    protected override void RemoveCallback(ListViewItem item)
    {
        base.RemoveCallback(item);
        item.onDoubleClick.RemoveListener(ProcessDoubleClick);
    }

    void ProcessDoubleClick(int index)
    {
        Debug.Log("double click: " + DataSource[index]);
    }
}
```

Scroll to Item

```
listView.ScrollToAnimated(index);
```

Disable Items

```
protected virtual void Start()
{
    listView.CanSelect = CanBuy;
}

bool CanBuy(Item item)
{
    return player.Money >= item.Price;
}
```

Example of ListView with Filter

```
namespace UIWidgets.Examples
{
    using System.Collections.Generic;
    using UIWidgets;
    using UnityEngine;
    using UnityEngine.Serialization;

    /// <summary>
    /// Sample ListViewIcons with filter.
    /// </summary>
    public class ListViewIconsWithFilter : ListViewIcons
    {
        [SerializeField]
        List<ListViewIconsItemDescription> listItems = new List
        <ListViewIconsItemDescription>();

        ObservableList<ListViewIconsItemDescription> originalItems;

        /// <summary>
        /// Get or sets items.
        /// </summary>
        public ObservableList<ListViewIconsItemDescription> OriginalItems
        {
            get
            {
                if (originalItems == null)
                {
                    originalItems = new ObservableList<ListViewIconsItemDescription>
                    <(listItems);
                    originalItems.OnChange += Filter;
                }

                return originalItems;
            }

            set
            {

```

(continues on next page)

(continued from previous page)

```

    {
        if (originalItems != null)
        {
            originalItems.OnChange -= Filter;
        }

        originalItems = value;

        if (originalItems != null)
        {
            originalItems.OnChange += Filter;
        }
    }
}

/// <summary>
/// Search string.
/// </summary>
protected string Search = string.Empty;

/// <summary>
/// Filter data using specified search string.
/// </summary>
/// <param name="search">Search string.</param>
public void Filter(string search)
{
    Search = search;
    Filter();
}

/// <summary>
/// Copy items from OriginalItems to DataSource if it's match specified string.
/// </summary>
protected void Filter()
{
    DataSource.BeginUpdate();
    DataSource.Clear();

    if (string.IsNullOrEmpty(Search))
    {
        // if search string not specified add all items
        DataSource.AddRange(OriginalItems);
    }
    else
    {
        // else add items with name starts with the specified string
        var finded = OriginalItems.FindAll(x => x.Name.StartsWith(Search));
        DataSource.AddRange(finded);
    }

    DataSource.EndUpdate();
}

/// <summary>
/// Init this instance.
/// </summary>
public override void Init()

```

(continues on next page)

(continued from previous page)

```
{
    base.Init();

    // call Filter() to set initial DataSource
    Filter();
}

/// <summary>
/// Process the destroy event.
/// </summary>
protected override void OnDestroy()
{
    if (originalItems != null)
    {
        originalItems.OnChange -= Filter;
    }

    base.OnDestroy();
}
}
```

3.1.7 TreeGraph

Options

- Nodes `ObservableList<TreeNode<TItem>>`
Not available in the inspector window.
- DefaultItem `TComponent`
A prefab used to display item.
- Direction `TreeGraphDirections`
Directions: `TopToBottom`, `BottomToTop`, `LeftToRight`, `RightToLeft`.
- Container `RectTransform`
The container of the instantiated gameobjects used to display items.
- Spacing `Vector2`
Minimal space between items.
- Line Type `ConnectorType`
Line type: `Straight` or `Rectangular`.
- Line Thickness `float`
Line thickness.
- Line Margin `float`
The minimum space from the border before the turn of the line. Supported only by `Rectangular` lines.

3.1.8 TreeView

- All collections widgets support virtualization: gameobjects created only for the visible items.
- Add `Selectable` component to use keyboard and gamepad navigation.

Attention: Different `TreeView`'s cannot display same nodes, unlike `ListView`, `TileView`, and `Table`.

Options

Options are almost same as the *`ListView`*, *`TileView`* and *`Table`*.

- `Nodes ObservableList<TreeNode<TItem>>`
Not available in the inspector window.
- `Deselect Collapsed Nodes bool`
Deselect nested nodes when parent node collapsed.
- `ScrollWithIndent bool`
Scrolling with node indent in the secondary direction.

Get nodes

```
public TreeView Tree;

ObservableList<TreeNode<TreeViewItem>> nodes;

void Start()
{
    nodes = Tree.Nodes;
}
```

Get selected nodes

```
Tree.SelectedNodes.ForEach(x =>
{
    // do something with selected node
    Debug.Log(x.Item.Name);

    var component = Tree.GetItemComponent(x.Index);

    // not displayed component will be null
    if (component != null)
    {
        component.DoSomething();
    }
});
```

Add listeners

```
void AddListeners ()
{
    Tree.NodeSelected.AddListener(ProcessSelectedNode);

    Tree.NodeDeselected.AddListener(ProcessDeselectedNode);
}

void ProcessSelectedNode(TreeNode<TreeViewItem> node)
{
    Debug.Log("selected: " + node.Item.Name);
}

void void ProcessDeselectedNode(TreeNode<TreeViewItem> node)
{
    Debug.Log("deselected: " + node.Item.Name);
}
```

Select node

```
Tree.SelectNode(nodes[1].Nodes[0]);
```

Select node with subnodes

```
Tree.SelectNodeWithSubnodes(nodes[1].Nodes[1]);
```

Deselect node

```
Tree.DeselectNode(nodes[1].Nodes[0]);
```

Deselect node with subnodes

```
Tree.DeselectNodeWithSubnodes(nodes[1].Nodes[1]);
```

Scroll to node

```
Tree.ScrollToAnimated(node);
```

Add node

```
var test_item = new TreeViewItem("added");
var test_node = new TreeNode<TreeViewItem>(test_item);
nodes.Add(test_node);
```

Hide nodes

```
nodes[1].IsVisible = false;
nodes[2].Nodes[1].IsVisible = false;
```

Collapse node

```
nodes[0].Nodes[0].IsExpanded = false;
```

Expand node

```
nodes[0].Nodes[0].IsExpanded = true;
```

Change node name

```
nodes[0].Item.Name = "Node renamed from code";
nodes[0].Nodes[1].Item.Name = "Another node renamed from code";
```

Sort

```
// Compare nodes by Name in ascending order
Comparison<TreeNode<TreeViewItem>> comparisonAsc = (x, y) => x.Item.Name.CompareTo(y.
↪Item.Name);

// Compare nodes by Name in descending order
Comparison<TreeNode<TreeViewItem>> comparisonDesc = (x, y) => -x.Item.Name.
↪CompareTo(y.Item.Name);

public void SortAsc()
{
    nodes.BeginUpdate();
    ApplyNodesSort(nodes, comparisonAsc);
    nodes.EndUpdate();
}

public void SortDesc()
{
    nodes.BeginUpdate();
    ApplyNodesSort(nodes, comparisonDesc);
    nodes.EndUpdate();
}
```

(continues on next page)

(continued from previous page)

```
void ApplyNodesSort<T>(ObservableList<TreeNode<T>> nodes, Comparison<TreeNode<T>>
↳comparison)
{
    // apply sort for current nodes
    nodes.Sort(comparison);
    // apply sort for child nodes
    nodes.ForEach(node =>
    {
        if (node.Nodes != null)
        {
            ApplyNodesSort(node.Nodes as ObservableList<TreeNode<T>>, comparison);
        }
    });
}
```

Filter nodes

```
public void Filter(string nameContains)
{
    // Maintains performance while items are added/removed/changed
    // by preventing the widgets from drawing
    // until the EndUpdate() method is called.
    nodes.BeginUpdate();

    SampleFilter(nodes, x => x.Name.Contains(nameContains));

    // Apply changes.
    nodes.EndUpdate();
}

bool SampleFilter(IObservableList<TreeNode<TreeViewItem>> nodes, Func<TreeViewItem,
↳bool> filterFunc)
{
    return nodes.Count(x =>
    {
        var have_visible_children = (x.Nodes==null) ? false : SampleFilter(x.Nodes,
↳filterFunc);
        x.IsVisible = have_visible_children || filterFunc(x.Item);
        return x.IsVisible;
    }) > 0;
}
```

Reset filter

```
public void ResetFilter()
{
    nodes.BeginUpdate();
    nodes.ForEach(SetVisible);
    nodes.EndUpdate();
}

void SetVisible(TreeNode<TreeViewItem> node)
{

```

(continues on next page)

(continued from previous page)

```

if (node.Nodes != null)
{
    node.Nodes.ForEach(SetVisible);
}

node.IsVisible = true;
}

```

Clear nodes

```

public void Clear()
{
    nodes.Clear();
}

```

3.2 Containers

3.2.1 Accordion

Options

- **Items (DataSource)** `ObservableList<AccordionItem>`
 Items.
 AccordionItem fields:
 - `ToggleObject GameObject` Click on this object open or close *ContentObject*.
 - `ContentObject GameObject`
 - `Open bool` Default state of the *ContentObject*.
- **Only One Open** `bool`
 Only one item can be open at the same time.
- **All Items Can Be Closed** `bool`
 Allow to close all items; otherwise at least one item always will be opened.
- **Animate** `bool`
 Animate open and close.
- **Animation Duration** `float`
 Animation Duration.
- **Unscaled Time** `bool`
 Run animation with unscaled time.
- **Direction** `AccordionDirection`
 - `Horizontal`
 - `Vertical`

- **Resize Method** `ResizeMethods`
 - **Size** - change width or height of the `ContentObject`.
 - **Flexible** - change `LayoutElement` `flexibleWidth` or `flexibleHeight` of the `ContentObject`.
- **Disable Closed** `bool`
 - Disable closed `ContentObjects`.

Events

- **OnToggleItem** `UnityEvent<AccordionItem>`
- **OnStartToggleAnimation** `UnityEvent<AccordionItem>`
- **OnDataSourceChanged** `UnityEvent`

AccordionHighlight

`AccordionHighlight` is a separate component to highlight `ToggleObjects` of the opened item.

Open item

```
Accordion.Open(Accordion.DataSource[0]);
```

Close item

```
Accordion.Close(Accordion.DataSource[0]);
```

Toggle item

```
Accordion.ToggleItem(Accordion.DataSource[0]);
```

Set items

```
Accordion.DataSource = new ObservableList<AccordionItem>()
{
    new AccordionItem()
    {
        ToggleObject = Header1,
        ContentObject = Content1,
        Open = true,
    },
    new AccordionItem()
    {
        ToggleObject = Header2,
        ContentObject = Content2,
        Open = false,
    },
    new AccordionItem()
```

(continues on next page)

(continued from previous page)

```
{
    ToggleObject = Header3,
    ContentObject = Content3,
    Open = false,
},
};
```

3.2.2 Tabs

Options

- `Container Transform`
Container for the tabs buttons.
- `DefaultTabButton Button`
Button template for the inactive tabs.
- `ActiveTabButton Button`
Button for the active tab.
- `TabObjects Tab[]`
Tabs array, contains names and references to the tabs gameobjects.
Tab fields:
 - `Name string`
 - `TabObject GameObject`
- `DefaultTabName string`
Name of the tab opened by default.
- `KeepTabsActive bool`
If true does not deactivate hidden tabs.
- `CanSelectTab Func<Tab, bool>`
Function to check is tab can be selected.

Events

- `OnTabSelect UnityEvent<int>`
Receive index of the selected tab.

Select tab

```
Tabs.SelectTab(Tabs.TabObjects[0]);
```

Enable tab

```
Tabs.EnableTab(Tabs.TabObjects[0]);
```

Disable tab

```
Tabs.DisableTab(Tabs.TabObjects[0]);
```

3.3 Controls

3.3.1 Context Menu

Options

- **Interactable** `bool`
Allow users interact with the ListView.
- **Template** `ContextMenuTemplate`
Context menu template.
- **MenuItems** `ObservableList<MenuItem>`
Menu items.
- **Is Default** `bool`
Is default menu? Default menu will be opened on context menu key press.
- **Navigation** `bool`
Enable keyboard and gamepad navigation.
- **Open On Right Button Click** `bool`
Open context menu on right mouse button click.
- **Open On Context Menu Key** `bool`
Open context menu on context menu key press.
- **Submenu Delay** `float`
Delay before open and close sub menu.
- **Unscaled Time** `bool`
Use unscaled time.

MenuItem Options

- `Visible bool`
Is item visible?
- `Interactable bool`
Is item interactable?
- `Icon Sprite`
Icon.
- `Checked bool`
Is item checked?
- `Name string`
Name.
- `HotKey HotKey`
HotKey can be enabled with `MenuItem.EnableHotKey()` even if item not used in menu (Supported only if `InputSystem` enabled).
- `Action UnityEvent<MenuItem>`
Action on item click.
- `Items ObservableList<MenuItem>`
Nested items.

Events

- `OnOpen UnityEvent<ContextMenu>`
The event raised when context menu opened.
Arguments: opened context menu.
- `OnClose UnityEvent<ContextMenu>`
The event raised when context menu closed.
Arguments: closed context menu.
- `OnItemSelect UnityEvent<MenuItem>`
The event raised when menu item selected.
Arguments: selected menu item.
- `OnItemDeselect UnityEvent<ContextMenu>`
The event raised when menu item deselected.
Arguments: selected menu item.

3.3.2 Paginator

Important: ScrollRect.Content anchors should be setted to top left corner.

How to select paginator

- If you need paginator with fixed items quantity per page use ListViewPaginator.
- If you need paginator where the page size is equal ScrollRect size use ScrollRectPaginator. Add TileViewScrollRectFitter if you also need the whole number of items on one page.
- Use ScrollRectPaginator for any ScrollRect outside ListView, TileView etc.

Options

- ScrollRect ScrollRect
ScrollRect to work with.
- Default Page RectTransform *optional*
Template GameObject to display inactive pages.
- Active Page RectTransform *optional*
Template GameObject to display active page.
- Prev Page RectTransform *optional*
GameObject, go to the previous page.
- Next Page RectTransform *optional*
GameObject, go to the next page.
- Direction PaginatorDirection
Scroll direction.
 - Auto detect direction by ScrollRect settings and ScrollRect.content size.
 - Horizontal scroll in the horizontal direction
 - Vertical scroll in the vertical direction
- Fast Drag Distance float
Scroll to the next or previous page if drag distance more than *Fast Drag Distance* and drag time less than *Fast Drag Time*. Set zero to disable.
- Fast Drag Time float
Scroll to the next or previous page if drag distance more than *Fast Drag Distance* and drag time less than *Fast Drag Time*. Set zero to disable.
- Forced Position PaginatorPagePosition
Automatically scroll to the nearest page after drag ended if not meet *Fast Drag* condition.
 - None automatical scroll disabled

- `OnStart` automatical scroll enabled; page aligned by the left side of the `ScrollRect` (or the top side if scroll in the vertical direction)
 - `OnCenter` automatical scroll enabled; page aligned by the center side of the `ScrollRect`
 - `OnEnd` automatical scroll enabled; page aligned by the right side of the `ScrollRect` (or the bottom side if scroll in the vertical direction)
- `Animation bool`
Enable animation.
- `Current Page int`
Default page.

Events

- `OnPageSelect UnityEvent<int>`

ScrollRectPaginator Options

- `Page Size Type PageSizeType`
If *Page Size Type* = *Auto* page size is equal to scroll rect size, if *Page Size Type* = *Fixed* will be used *Page Size* value.
 - `Auto`
 - `Fixed`
- `Page Size float`
Size of the page.
- `Page Spacing float`
Space between pages.
- `Movement AnimationCurve`
Animation curve.
- `Unscaled Time bool`
Run animation with unscaled time.

ListViewPaginator Options

- `PerPage int`
Items count on one page, for `TileView` this is rows or columns count per page.

`ListViewPaginator` works with `ListLiew`, `TileView` (in this case `PerPage` is rows or columns count) and `TreeView`. `ListView` animation settings used if animation enabled.

Tile View ScrollRect Fitter

Resize ScrollRect to fit the whole number of columns and rows. Add it to gameobject with TileView script.

3.3.3 Sidebar

Component to drag sidebar from behind the screen.

Options

- `Interactable bool`
Enable or disable the ability to drag the sidebar.
- `Curve AnimationCurve`
Animation curve for the open and close animations.
- `Direction SidebarAxis`
Drag direction to open sidebar.
- `Animation Type SidebarAnimation`
 - `Overlay`
 - `Push`
 - `Scale Down`
 - `Uncover`
 - `Slide Along`
 - `Slide Out`
 - `Resize`
 - `Scale Down and Push`
- `Scale Down Limit float`
Content scale cannot be lower this value for the ScaleDown animation.
- `Is Open bool`
Is sidebar opened?
- `Modal bool`
Is sidebar should be closed with the click outside of the sidebar?
- `ScrollRect Support bool`
Allow to handle children ScrollRect's drag events.
- `Content RectTransform`
Content GameObject. Required by some animations.
- `Animate With Layout bool`
Change Content LayoutElement size during animation.
- `Optional Handle GameObject optional`

Handle to open and close sidebar.

- Unscaled Time `bool`

Run animations with unscaled time.

Events

- OnOpen `UnityEvent`
- OnClose `UnityEvent`
- OnOpeningStarted `UnityEvent`
- OnClosingStarted `UnityEvent`

3.3.4 SplitButton

Button with the additional dropdown list of the buttons.

Options

- Primary Button `Button`
Primary Button.
- Toggle Button `Button`
Button to toggle the *Additional Buttons Block*.
- Additional Buttons Block `GameObject`
Container for the additional buttons.
- Additional Buttons `List<Button>`
List of the additional buttons.
- Modal Sprite `Sprite`
Background sprite when additional buttons block displayed.
- Modal Color `Color`
Background color when additional buttons block displayed.

3.4 Dialogs

Dialogs, Popups, Pickers, Notifications works with templates.

Code usually looks like this:

```
dialogTemplate.Clone().Show(...)
```

`Clone()` method creates a new instance of the *dialogTemplate* (or takes an instance from the cache if available) and displayed will be this instance, not the original template.

This way, you need only one template to display multiple dialogs at the same time, and also closed dialogs instances are automatically recycled.

But if you have a script outside of the *dialogTemplate* hierarchy and it has reference to the component inside a hierarchy, this reference will never be replaced with the new instance.

The script will be work with *dialogTemplate*, not with actually displayed dialog. To change this behavior, you need to move the script inside the dialog hierarchy.

3.4.1 DatePicker, DateTimePicker, TimePicker

Nested Widgets Replacement

Nested widgets can be safely replaced with their analogs:

- time can be displayed with *Time24*, *Time12*, *TimeAnalog*, *TimeScroller*
- date can be displayed with *Calendar*, *DateScroller*
- datetime can be displayed with *DateTime*, *DateTimeScroller*.

Options

- Calendar `DateBase`
Reference to the Date widget.
- Date Change Only `bool`
If true select date only when date changes; otherwise select date on click.

```
namespace UIWidgets.Examples
{
    using System;
    using UIWidgets;
    using UnityEngine;
    using UnityEngine.UI;

    /// <summary>
    /// Test DatePicker.
    /// </summary>
    public class TestDatePicker : MonoBehaviour
    {
        [SerializeField]
        DatePicker PickerTemplate;

        [SerializeField]
        Text Result;

        DateTime currentValue = DateTime.Today;

        /// <summary>
        /// Open picker and log selected value.
        /// </summary>
        public void Test ()
        {
            // create picker by template
            var picker = PickerTemplate.Clone();
```

(continues on next page)

(continued from previous page)

```

        // show picker
        picker.Show(currentValue, ValueSelected, Canceled);
    }

    void ValueSelected(DateTime value)
    {
        currentValue = value;
        Debug.Log("value: " + value);
    }

    void Canceled()
    {
        Debug.Log("canceled");
    }

    /// <summary>
    /// Open picker and display selected value.
    /// </summary>
    public void TestShow()
    {
        // create picker by template
        var picker = PickerTemplate.Clone();

        // show picker
        picker.Show(currentValue, ShowValueSelected, ShowCanceled);
    }

    void ShowValueSelected(DateTime value)
    {
        currentValue = value;
        Result.text = "Value: " + value;
    }

    void ShowCanceled()
    {
        Result.text = "Canceled";
    }
}

```

3.4.2 Dialog

Options

- Buttons Templates `ReadOnlyCollection<Button>`
Templates for the buttons.
- Content Root `RectTransform`
Root gameobject for the content.
- Title Text `Text` (obsolete)
GameObject to display title. Replaced with the *DialogInfo*.

- `Content Text Text` (obsolete)
 `GameObject` to display text. Replaced with the *DialogInfo*.
- `Icon Image` (obsolete)
 `GameObject` to display icon. Replaced with the *DialogInfo*.
- `Dialog Info DialogInfoBase`
 Component to display the dialog info.
- `CloseButton Button`
 Button to close dialog.

Show() Method Parameters

All parameters are optional.

`title` and `message` also can be specified with `SetInfo()` to use formatted strings.

- `title string`
 Dialog title.
 Can be changed with `SetInfo()` method.
- `message string`
 Dialog message.
 Can be changed with `SetInfo()` method.
- `buttons IList<DialogButton>`
 Dialog buttons.
 Can be changed with `SetButtons()` method.
 `DialogButton` fields:
 - `Label string`
 Button label.
 - `Action Func<int, bool>`
 Function to run on button click. Receive button index and return `true` to close dialog; otherwise `false`.
 - `Template Index int`
 Index of the button template.
- `focusButton string`
 Button with focus by default.
 Can be changed with `SetButtons()` or `FocusButton()`.
- `position Vector3?`
 Dialog position.
 Can be changed with `SetPosition()`.
- `icon Sprite`
 Dialog icon.

Can be changed with `SetInfo()` method.

- `modal bool`

Modal dialog.

Can be changed with `SetModal()`.

- `modalSprite Sprite`

Background image for the modal dialog.

Can be changed with `SetModal()`.

- `modalColor Color?`

Background color for the modal dialog.

Can be changed with `SetModal()`.

- `canvas Canvas`

Canvas to display dialog. Required if dialog template is prefab.

Can be changed with `SetCanvas()`.

- `content RectTransform`

Dialog content. Can be used instead of the *message* and *icon*.

Can be changed with `SetContent()`.

- `onClose Action`

Action to run when dialog closed.

Can be changed with `OnClose` field.

- `onCancel Func<int, bool>`

Function to run when dialog canceled. Receive -1 and return `true` if dialog should be closed.

Can be changed with `OnCancel` field.

Minimal code

```
// create dialog from template
var dialog = dialogTemplate.Clone();
// show dialog
dialog.Show();
// specify root canvas if dialog cloned from prefab
dialog.Show(canvas: canvas);
```

Advanced

```
// create dialog from template
var dialog = dialogPrefab.Clone();
// show dialog with following parameters
dialog.Show(
    title: "Modal Dialog",
    message: "Simple Modal Dialog.",
    buttons: new DialogButton[]
    {
        new DialogButton(
            "Close", // label
```

(continues on next page)

(continued from previous page)

```

        Dialog.AlwaysClose, // Func<int, bool>, receive button index and return true
        ↳ to close dialog, otherwise false
        0 // button index in ButtonsTemplates
    ),
},
focusButton: "Close",
modal: true,
modalColor: new Color(0, 0, 0, 0.8f)
);

```

Adding new behaviour

1. Create helper component

```

using UnityEngine;
using UnityEngine.UI;

public class DialogInputHelper : MonoBehaviour {
    [SerializeField]
    public InputField Username;

    [SerializeField]
    public InputField Password;

    // Reset values
    public void Refresh()
    {
        Username.text = "";
        Password.text = "";
    }

    public bool Validate()
    {
        var valid_username = Username.text.Trim().Length > 0;
        var valid_password = Password.text.Length > 0;

        if (!valid_username)
        {
            Username.Select();
        }
        else if (!valid_password)
        {
            Password.Select();
        }

        return valid_username && valid_password;
    }
}

```

2. Show dialog.

```

public void ShowDialogSignIn()
{
    var dialog = dialogSignIn.Clone();
    var helper = dialog.GetComponent<DialogInputHelper>();
}

```

(continues on next page)

(continued from previous page)

```

helper.Refresh();

dialog.Show(
    title: "Sign into your Account",
    buttons: new DialogButton[]
    {
        // on click call SignInNotify
        new DialogButton("Sign in", (index) => SignInNotify(helper)),

        // on click close dialog
        new DialogButton("Cancel", Dialog.AlwaysClose),
    },
    focusButton: "Sign in",
    modal: true,
    modalColor: new Color(0, 0, 0, 0.8f)
);

bool SignInNotify(DialogInputHelper helper)
{
    //if username or password empty than don't close dialog
    if (!helper.Validate())
    {
        return false;
    }

    //show notification
    var message = "Sign in.\nUsername: " + helper.Username.text + "\nPassword:
    ↪<hidden>";
    notifySample.Clone().Show(message, customHideDelay: 3f);

    return true;
}

```

Custom Dialogs

You can create derived class with own methods.

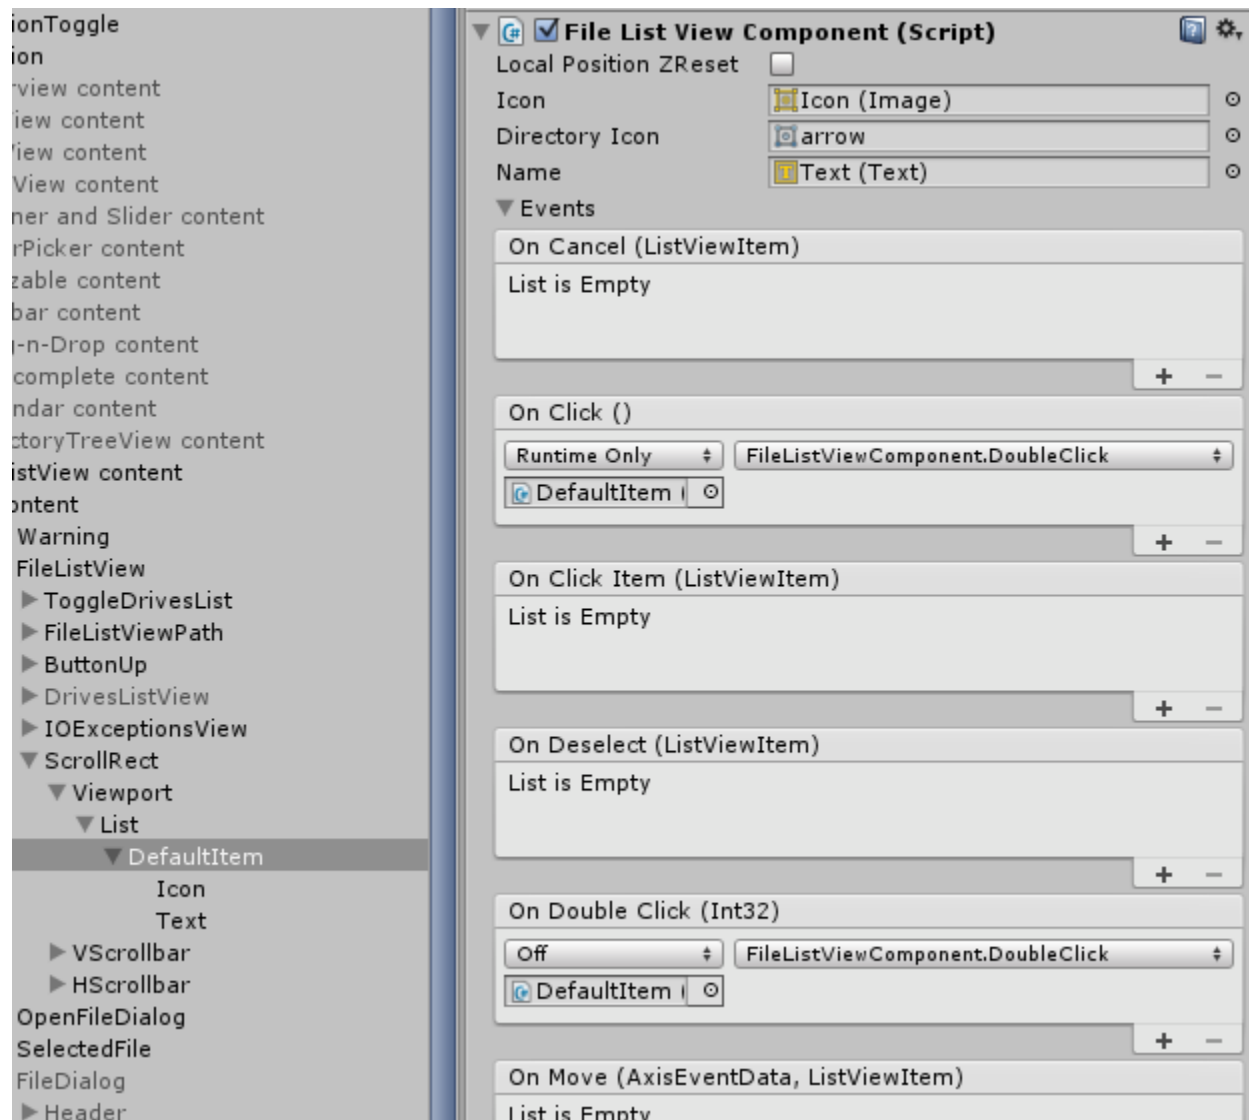

```

public class MyDialog : DialogCustom<MyDialog>
{
    // ...
}

```

3.4.3 FileDialog

If you want to open directories and select files with a single click instead of the double-click just move `FileListView.DefaultItemDoubleClick` callback to `OnClick` event.

Options

- File List View `FileListView`
FileListView.
- Confirm Dialog `PickerBool`
Dialog to get confirmation if *Request Confirmation If File Exists* enabled.
- FilenameInput `InputField`
Input for the filename.
- OkButton `Button`
Button to close dialog.
- FileShouldExists `bool`
Selected file should exists.

- Request Confirmation If File Exists bool

Show *Confirm Dialog* if file exists.

Code examples

```
namespace UIWidgets.Examples
{
    using UIWidgets;
    using UnityEngine;
    using UnityEngine.UI;

    /// <summary>
    /// Test FileDialog.
    /// </summary>
    public class TestFileDialog : MonoBehaviour
    {
        [SerializeField]
        FileDialog PickerTemplate;

        [SerializeField]
        Text Result;

        string currentValue = string.Empty;

        /// <summary>
        /// Show picker and log selected value.
        /// </summary>
        public void Test()
        {
            // create picker by template
            var picker = PickerTemplate.Clone();

            // show picker
            picker.Show(currentValue, ValueSelected, Canceled);
        }

        void ValueSelected(string value)
        {
            currentValue = value;
            Debug.Log("value: " + value);
        }

        void Canceled()
        {
            Debug.Log("canceled");
        }

        /// <summary>
        /// Show picker and display selected value.
        /// </summary>
        public void TestShow()
        {
            // create picker by template
            var picker = PickerTemplate.Clone();

            // show picker
            picker.Show(currentValue, ShowValueSelected, ShowCanceled);
        }
    }
}
```

(continues on next page)

(continued from previous page)

```
void ShowValueSelected(string value)
{
    currentValue = value;
    Result.text = "Value: " + value;
}

void ShowCanceled()
{
    Result.text = "Canceled";
}
}
```

3.4.4 FolderDialog

Options

- Directory Tree View `DirectoryTreeView`
DirectoryTreeView widget.
- Ok Button `Button`
Button to close dialog.

```
namespace UIWidgets.Examples
{
    using UIWidgets;
    using UnityEngine;
    using UnityEngine.UI;

    /// <summary>
    /// Test FolderDialog.
    /// </summary>
    public class TestFolderDialog : MonoBehaviour
    {
        [SerializeField]
        FolderDialog PickerTemplate;

        [SerializeField]
        Text Result;

        string currentValue = string.Empty;

        /// <summary>
        /// Show picker and log selected value.
        /// </summary>
        public void Test()
        {
            // create picker by template
            var picker = PickerTemplate.Clone();

            // show picker
            picker.Show(currentValue, ValueSelected, Canceled);
        }
    }
}
```

(continues on next page)

(continued from previous page)

```
void ValueSelected(string value)
{
    currentValue = value;
    Debug.Log("value: " + value);
}

void Canceled()
{
    Debug.Log("canceled");
}

/// <summary>
/// Show picker and display selected value.
/// </summary>
public void TestShow()
{
    // create picker by template
    var picker = PickerTemplate.Clone();

    // show picker
    picker.Show(currentValue, ShowValueSelected, ShowCanceled);
}

void ShowValueSelected(string value)
{
    currentValue = value;
    Result.text = "Value: " + value;
}

void ShowCanceled()
{
    Result.text = "Canceled";
}
}
```

3.4.5 Notifications

Important: If you want to display more than one notification at the same time, then *notification container* should have *layout group* component like `EasyLayout`. Start positions of notifications are determined with `Group Position`.

Options

- `Hide Button Button`
Button to close notification.
- `Text Text (obsolete)`
GameObject to display the notification text. Replaced with `NotifyInfo`.
- `Hide Delay float`
Delay before notification automatically hidden.
- `Unscaled Time bool`
Delay with unscaled time.
- `SlideUpOnHide bool`
Start slide up animations after hide current notification. Turn it off if its managed with `HideAnimation`.
- `NotifyInfo NotifyInfoBase`
Component to display the notification message.
- `CloseButton Button`
Button to close notification.

Show() Method Parameters

All parameters are optional.

message also can be specified with `SetMessage()` to use formatted strings.

- `message string`
Notification message.
Can be changed with `SetMessage()` method.
- `customHideDelay float?`
Time before notification hidden or `hideAnimation` start running.
Can be changed with `HideDelay` field.
- `container Transform?`
Notifications container. Should have `Layout Group` component to display multiple notifications.
Can be changed with `SetContainer()` method.
- `showAnimation Func<Notify, IEnumerator>`
Show animation.
Can be changed with `ShowAnimation` field.
- `hideAnimation Func<Notify, IEnumerator>`
Hide animation.
Can be changed with `HideAnimation` field.
- `slideUpOnHide bool?`
Start slide up animations after hide current notification.

Can be changed with `SlideUpOnHide` field.

- `sequenceType` `NotifySequence`

Add notification to sequence and display in order according specified `sequenceType`.

- `sequenceDelay` `float`

Time between previous notification was hidden and this will be displayed.

Can be changed with `SequenceDelay` field.

- `clearSequence` `bool`

Clear notifications sequence.

- `newUnscaledTime` `bool?`

Animations will use unscaled time.

- `content` `RectTransform`

Notification content.

Can be changed with `SetContent()`.

- `onReturn` `Action`

Action called when instance return to the cache.

Can be changed with `OnReturn` field.

Minimal code

```
// get notification instance by template name (name of existing GameObject with
↳ NotificationBase component).
var notification = notificatetionTemplate.Clone();
// show notification
notification.Show();
```

Advanced

```
var notification = notificatetionTemplate.Clone();
// show notification
notification.Show(
    // Show notification with following text
    message: "Simple Notification.",
    // Hide it after 4.5 seconds
    customHideDelay = 4.5f,
    // Run specified animation on hide
    hideAnimation = NotificationBase.AnimationCollapseVertical,
    // without SlideUpOnHide
    slideUpOnHide = false
);
```

Default Hide Animations

Note: Hide Animation is coroutine that accepts `NotificationBase` instance and play hide animation for this instance. You can specify any custom coroutine.

- **AnimationRotateHorizontal** Rotate notification on X axis.
- **AnimationRotateVertical** Rotate notification on Y axis.
- **AnimationCollapseHorizontal** Resize width of the notification.
- **AnimationCollapseVertical** Resize height of the notification.
- **AnimationSlideRight** Slide notification on right.
- **AnimationSlideLeft** Slide notification on left.
- **AnimationSlideUp** Slide notification on up.
- **AnimationSlideDown** Slide notification on down.

Default Show Animations

Note: Show Animation is coroutine that accepts `NotificationBase` instance and play show animation for this instance. You can specify any custom coroutine.

- **ShowAnimationRotateHorizontal** Rotate notification on X axis.
- **ShowAnimationRotateVertical** Rotate notification on Y axis.
- **ShowAnimationCollapseHorizontal** Resize width of the notification.
- **ShowAnimationCollapseVertical** Resize height of the notification.
- **ShowAnimationSlideRight** Slide notification from right.
- **ShowAnimationSlideLeft** Slide notification from left.
- **ShowAnimationSlideUp** Slide notification from top.
- **ShowAnimationSlideDown** Slide notification from bottom.

Configurable Hide Animations

- **HideAnimationRotateBase**

Arguments:

- **NotificationBase notification** Notification instance.
- **bool isHorizontal** Rotate in horizontal or vertical direction.
- **float timeLength** Length of animations in seconds.

- **HideAnimationCollapseBase**

Arguments:

- **NotificationBase notification** Notification instance.

- **bool isHorizontal** Resize in horizontal or vertical direction.
- **float speed** Resize speed in points per second.

- **HideAnimationSlideBase**

Arguments:

- **NotificationBase notification** Notification instance.
- **bool isHorizontal** Slide in horizontal or vertical direction.
- **float direction** Slide direction, -1f for left/down, +1f for right/up.
- **float speed** Slide speed in points per second.
- **bool animateReplacement** Animate other notifications.

```
NotificationTemplate.Clone().Show(
    "Notification message.",
    customHideDelay: 3f,
    hideAnimation: x => NotificationBase.HideAnimationSlideBase(x, true, -1f, 200f,
↳ true)
);
```

Configurable Show Animations

- **ShowAnimationRotateBase**

Arguments:

- **NotificationBase notification** Notification instance.
- **bool isHorizontal** Rotate in horizontal or vertical direction.
- **float timeLength** Length of animations in seconds.

- **ShowAnimationCollapseBase**

Arguments:

- **NotificationBase notification** Notification instance.
- **bool isHorizontal** Resize in horizontal or vertical direction.
- **float speed** Resize speed in points per second.

- **ShowAnimationSlideBase**

Arguments:

- **NotificationBase notification** Notification instance.
- **bool isHorizontal** Slide in horizontal or vertical direction.
- **float direction** Slide direction, -1f for left/down, +1f for right/up.
- **float speed** Slide speed in points per second.
- **bool animateReplacement** Animate other notifications.

```
NotificationTemplate.Clone().Show(
    "Notification message.",
    customHideDelay: 3f,
```

(continues on next page)

(continued from previous page)

```

        showAnimation: x => NotificationBase.ShowAnimationSlideBase(x, true, -1f, 200f,
↪true)
    );

```

Custom Notifications

You can create derived class with own methods.

```

public class MyNotify : NotificationCustom<MyNotify>
{
    // ...
}

```

3.4.6 Pickers

Base class for the custom pickers.

```

namespace UIWidgets.Examples
{
    using System.Linq;
    using UIWidgets;
    using UnityEngine;

    public class PickerIntTest : MonoBehaviour
    {
        [SerializeField]
        PickerInt PickerTemplate;

        int currentValue = 0;

        public void Test()
        {
            // create picker by template
            var picker = PickerTemplate.Clone();

            // set values from template
            picker.ListView.DataSource = PickerTemplate.ListView.DataSource.
↪ToObservableList();
            // or set new values
            //picker.ListView.DataSource = Enumerable.Range(1, 100).
↪ToObservableList();

            // show picker with callbacks
            picker.Show(currentValue, ValueSelected, Canceled);
        }

        // will be called if value selected
        void ValueSelected(int value)
        {
            currentValue = value;
            Debug.Log("value: " + value);
        }
    }
}

```

(continues on next page)

(continued from previous page)

```

        // will be called if cancel button pressed
        void Canceled()
        {
            Debug.Log("canceled");
        }
    }
}

```

3.4.7 Popup

Options

- `Title Text Text` (obsolete)
GameObject to display title. Replaced with the *DialogInfo*.
- `Content Text Text` (obsolete)
GameObject to display text. Replaced with the *DialogInfo*.
- `Icon Image` (obsolete)
GameObject to display icon. Replaced with the *DialogInfo*.
- `Info DialogInfoBase`
Component to display the popup info.
- `CloseButton Button`
Button to close popup.

Show() Method Parameters

All parameters are optional.

`title` and `message` also can be specified with `SetInfo()` to use formatted strings.

- `title string`
Popup title.
- `message string`
Popup message.
- `position Vector3?`
Popup position.
- `icon Sprite`
Popup icon.
- `modal bool`
Modal popup.
- `modalSprite Sprite`
Background image for the modal popup.

- `modalColor Color?`
Background color for the modal popup.
- `canvas Canvas`
Canvas to display popup. Required if popup template is prefab.

Minimal code

```
// create popup from template
var popup = popupTemplate.Clone();
// show popup
popup.Show();
// specify root canvas if popup cloned from prefab
dialog.Show(canvas: canvas);
```

Advanced

```
// create popup from template
var popup = popupTemplate.Clone();
// show popup with following parameters
popup.Show(
    title: "Modal popup",
    message: "Simple Modal popup.",
    modal: true,
    modalColor: new Color(0, 0, 0, 0.8f)
);
```

3.5 Input

3.5.1 Autocomplete

Options

- `Input Field InputField`
Input field.
- `Target List View TListView`
ListView to display available values.
- `Display List View TListView`
Selected value will be added to this ListView.
- `Allow Duplicate bool`
TargetListView can have duplicated items.
- `Data Source List<TValue>`
List of the all values.
- `Filter AutocompleteFilter`

Filter settings.

- Startswith

Value should starts with the specified input.

- Contains

Value should contains with the specified input.

- Case Sensitive `bool`

Is filter case sensitive?

- Delimiter Chars `char[]`

Delimiter chars to split input to the words.

- Input Type `AutocompleteInput`

Filter with the current word or the whole input.

- Word
- AllInput

- Result `AutocompleteResult`

What to do with input after value selected.

- Append
- Replace

- Min Length `int`

Minimal length of the input to start search.

- Search Delay `float`

The delay in seconds between when a keystroke occurs and when a search is performed.

- Unscaled Time `bool`

Delay with unscaled time.

Events

- OnOptionSelected `UnityEvent`
- OnOptionSelectedItem `UnityEvent<TValue>`
- OnItemNotFound `UnityEvent<string>`
- OnCancelInput `UnityEvent`

```
namespace UIWidgets.Examples
{
    using UIWidgets;
    using UnityEngine;

    public class AutocompleteIconsText : MonoBehaviour
    {
        [SerializeField]
        public AutocompleteIcons Autocomplete;
    }
}
```

(continues on next page)

(continued from previous page)

```
[SerializeField]
ListViewIconsItemDescription item;

void Start()
{
    Autocomplete.OnOptionSelectedItem.AddListener(SetItem);
}

void OnDestroy()
{
    Autocomplete.OnOptionSelectedItem.RemoveListener(SetItem);
}

void SetItem(ListViewIconsItemDescription newItem)
{
    item = newItem;
}
}
```

3.5.2 Calendar

Note: `DateTime.TimeOfDay` is not setted or changed by `Calendar`.

Options

- `Interactable bool`
Is interactable?
- `Date DateTime`
Current date.
- `Date Min DateTime`
Minimal date.
- `Date Max DateTime`
Maximum date.
- `First Day Of Week DayOfWeek`
First day of the week.
- `Container RectTransform`
Container for the dates.
- `Calendar Date Template CalendarDateBase`
Template for the date.
- `HeaderContainer RectTransform`
Container for the day of weeks.

- **Calendar Day Of Week Template** `CalendarDayOfWeekBase`
Template for the day of week.
- **Date Text** `Text`
Text to display the current date.
- **Month Text** `Text`
Text to display the current month.

Events

- **OnDateChanged** `UnityEvent<DateTime>`
- **OnClick** `UnityEvent<DateTime>`

```
namespace UIWidgets.Examples
{
    using UnityEngine;

    /// <summary>
    /// Test Calendar.
    /// </summary>
    public class TestCalendar : MonoBehaviour
    {
        /// <summary>
        /// Calendar.
        /// </summary>
        [SerializeField]
        protected UIWidgets.Calendar Calendar;

        /// <summary>
        /// Start this instance.
        /// </summary>
        protected virtual void Start()
        {
            Calendar.OnDateChanged.AddListener(ProcessDate);

            // change first day of the week
            Calendar.FirstDayOfWeek = System.DayOfWeek.Sunday;

            // change culture (display days and months in english)
            Calendar.Culture = new System.Globalization.CultureInfo("en-US");

            // change culture (display days and months in french)
            Calendar.Culture = new System.Globalization.CultureInfo("fr-FR");

            // change calendar
            SetCalendar(new System.Globalization.JapaneseCalendar());
        }

        void ProcessDate(System.DateTime dt)
        {
            Debug.Log(dt);
        }

        void SetCalendar(System.Globalization.Calendar calendar)
```

(continues on next page)

(continued from previous page)

```
{
    {
        Calendar.Culture.DateTimeFormat.Calendar = calendar;
        Calendar.UpdateCalendar();
    }
}
```

3.5.3 Centered Slider

The differences from a default slider:

- zero at center
- positive and negative parts have different scales.

Options

- Value `int`
Current value.
- Use Value Limits `bool`
Value cannot exceed the specified limits.
- Limit Min `int`
Minimal limit of the value.
- Limit Max `int`
Maximum limit of the value.
- Value Min `int`
Minimal value.
- Value Max `int`
Maximal value.
- Step `int`
Value step.
- Whole Number Of Steps `bool`
Whole number of steps for the value.
- Handle `RangeSliderHandle`
Handle to drag.
- UsableRangeRect `RectTransform`
Usable range.
- FillRect `RectTransform`
GameObject to display fill (line from center to the current value).

Events

- `OnValueChanged` `UnityEvent<int>`
- `OnChange` `UnityEvent`

Set value

```
slider.Value = 150;
```

Set display limits

```
slider.LimitMin = -500;  
slider.LimitMax = 250;
```

Set value limits

```
slider.UseValueLimits = true;  
slider.ValueMin = -100;  
slider.ValueMax = 200;
```

3.5.4 Circular Slider

Options

- `Interactable` `bool`
Is interactable?
- `Handle` `DragListener`
Handle to drag.
- `Arrow` `RectTransform`
Arrow.
- `Value` `int`
Current value.
- `Min Value` `int`
Minimal value.
- `Max Value` `int`
Maximal value.
- `Step` `int`
Value step.
- `Start Angle` `float`
Angle for the Min Value.

Events

- `OnValueChanged` `UnityEvent<int>`
- `OnChange` `UnityEvent`

Set value

```
slider.Value = 150;
```

Set value limits

```
slider.MinValue = 100;  
slider.MaxValue = 200;
```

3.5.5 ColorPicker

Set color

```
ColorPicker.Color = Color.cyan;
```

Get color

```
Debug.Log(ColorPicker.Color);
```

Add listener

```
void Start()  
{  
    ColorPicker.OnChange.AddListener(ColorChanged);  
}  
  
void ColorChanged(Color32 color)  
{  
    Debug.Log("selected color: " + Color);  
}
```

3.5.6 DateTime

Nested widgets can be safely replaced with their analogs:

- time can be displayed with *Time24*, *Time12*, *TimeAnalog*, *TimeScroller*
- date can be displayed with *Calendar*, *DateScroller*

DateScroller Options

- Current Date Time As Default `bool`
 - Default Date Time `DateTime` (`string` in Inspector window)
 - Format `string`
Format to parse **Default Date Time**.
- Calendar `DateBase`
Widget to select date.
- Time `TimeBase`
Widget to select time.
- Is Scroll Blocks Used `bool`
Is Calendar and Time widgets are *scrollers*? Required for the styles support.

Events

- OnDateTimeChanged `UnityEvent<DateTime>`
The event raised when date changed.
Arguments: selected datetime.

3.5.7 DateScroller, DateTimeScroller, TimeScroller

Note: `DateTime.TimeOfDay` is not setted or changed by `DateScroller`, but changed by `DateTimeScroller`.

Note: [DateTime Formats Strings](#)

DateScroller Options

- Interactable `bool`
User can interact with `ListView`.
- Current Date As Default `bool`
 - Default Date `DateTime` (`string` in Inspector window)
- Default Date Min `DateTime` (`string` in Inspector window)
Minimal selectable date.
- Default Date Max `DateTime` (`string` in Inspector window)
Maximum selectable date.
- Format `string`
Format to parse **Default Date**, **Default Date Min**, and **Default Date Max**.
- Independent scroll `bool`

If enabled any time period changes will not change other time periods.

- `Years bool`

Display years scroller.

- `Years Scroller Scroller`
- `Years Step int`
- `Years Format string`

- `Months bool`

Display months scroller.

- `Months Scroller Scroller`
- `Months Step int`
- `Months Format string`

- `Days bool`

Display days scroller.

- `Days Scroller Scroller`
- `Days Step int`
- `Days Format string`

- `Events`

- `OnDateChanged UnityEvent<DateTime>`
The event raised when date changed.
Arguments: selected datetime.
- `OnDateClick UnityEvent<DateTime>`
The event raised when date setted or changed.
Arguments: selected datetime.

DateTimeScroller Options

Same settings as `DateScroller` with addition:

- `Hours bool`

Display hours scroller.

- `Hours Scroller Scroller`
- `Hours Step int`
- `Hours Format string`
Used if **AMPM** disabled.
- `Hours AMPM Format string`
Used if **AMPM** enabled.

- `Minutes bool`

Display minutes scroller.

- Minutes Scroller Scroller
 - Minutes Step `int`
 - Minutes Format `string`
- Seconds `bool`
Display seconds scroller.
 - Seconds Scroller Scroller
 - Seconds Step `int`
 - Seconds Format `string`
- AMPM `bool`
Display AMPM scroller.
 - AMPM Scroller Scroller
 - AMPM Format `string`

TimeScroller Options

- Interactable `bool`
User can interact with ListView.
- Current Time As Default `bool`
 - Time Text `TimeSpan` (`string` in Inspector window)
- Default Time Min `TimeSpan` (`string` in Inspector window)
Minimal selectable time.
- Default Time Max `TimeSpan` (`string` in Inspector window)
Maximum selectable time.
- Format `string`
Format to parse **Time Text**, **Default Time Min**, and **Default Time Max**.
- Independent scroll `bool`
If enabled any time period changes will not change other time periods.
- Hours `bool`
Display hours scroller.
 - Hours Scroller Scroller
 - Hours Step `int`
- Minutes `bool`
Display minutes scroller.
 - Minutes Scroller Scroller
 - Minutes Step `int`
- Seconds `bool`
Display seconds scroller.

- Seconds Scroller Scroller
- Seconds Step int
- AMPM bool
 - Display AMPM scroller.
 - AMPM Scroller Scroller
- Events
 - OnTimeChanged UnityEvent<TimeSpan>
 - The event raised when time changed.
 - Arguments: selected time.

```
namespace UIWidgets.Examples
{
    using UnityEngine;

    /// <summary>
    /// Test DateScroller.
    /// </summary>
    public class TestDateScroller : MonoBehaviour
    {
        /// <summary>
        /// DateScroller.
        /// </summary>
        [SerializeField]
        protected UIWidgets.DateBase DateScroller;

        /// <summary>
        /// Start this instance.
        /// </summary>
        protected virtual void Start()
        {
            DateScroller.OnDateChanged.AddListener(ProcessDate);

            // change culture
            DateScroller.Culture = new System.Globalization.CultureInfo("en-US");

            // change calendar
            DateScroller.Culture = new System.Globalization.CultureInfo("ja-JP");
            DateScroller.Culture.DateTimeFormat.Calendar = new System.Globalization.
↪JapaneseCalendar();
        }

        void ProcessDate(System.DateTime dt)
        {
            Debug.Log(dt);
        }
    }
}
```

3.5.8 RangeSlider

Slider with two handles for minimum and maximum. Has versions for the `int` and `float` types.

Options

- `Type RangeSliderType`
Type of the slider.
 - `AllowHandleOverlay`
Handles can intersects. Value scale is constant.
 - `DisableHandleOverlay`
Handles can not intersects. Value scale is variable.
- `Value Min int/float`
Minimal value.
- `Value Max int/float`
Maximal value.
- `Step int/float`
Step of the value.
- `Limit Min int/float`
Value cannot be less that this.
- `Limit Max int/float`
Value cannot be more that this.
- `Handle Min RangeSliderHandle`
Handle to change the minimal value.
- `Handle Max RangeSliderHandle`
Handle to change the maximal value.
- `UsableRangeRect RectTransform`
Usable range.
- `FillRect RectTransform`
GameObject to display fill (line from minimal value to the maximal value).
- `Whole Number Of Steps bool`
Whole number of steps for the value.

Events

- OnValuesChanged UnityEvent<int, int>/UnityEvent<float, float>
- OnChange UnityEvent

Set values

```
slider.ValueMin = 10;
slider.ValueMax = 80;
```

Set step

```
slider.Step = 2;
```

Set limits

```
slider.LimitMin = 0;
slider.LimitMax = 100;
```

Add listener

```
void Start()
{
    slider.OnValuesChange.AddListener(SliderChanged);
}

void SliderChanged(int min, int max)
{
    if (slider.WholeNumberOfSteps)
    {
        Debug.Log(string.Format("Range: {0:000} - {1:000}; Step: {2}", min, max, slider.
↪Step));
    }
    else
    {
        Debug.Log(string.Format("Range: {0:000} - {1:000}", min, max));
    }
}
```

3.5.9 Scale

Scale for the sliders: default Slider, *RangeSlider* (Disable Handle Overlay is not supported), *CenteredSlider*. To use add the appropriate SliderScale / RangeSliderScale / CenteredSliderScale component to the Slider, then create and specify Scale gameobject.

Options

- `Container RectTransform`
Marks container.
- `Main Line Image`
Main line.
- `Show Current Value bool`
Show marks for the current values.
- `Current Mark Template ScaleMarkTemplate`
Template for the current mark.
- `Show Min Value bool`
Show mark for the min value.
- `Min Mark ScaleMarkTemplate`
Minimum mark.
- `Show Max Value bool`
Maximum mark.
- `Scale Marks List<ScaleMark>`
Marks templates.
- `MarkValuesGenerator` `Action<float min, float max, float step, List<float> output>`
Fill output list with values where marks should be displayed.

ScaleMark

- `Step float`
Value difference between marks.
- `Template ScaleMarkTemplate`
Mark template.

SliderScale and RangeSliderScale Components

- `Scale Scale`
Scale gameobject.
- `Format string`
Format to display mark value.
 - <https://docs.microsoft.com/en-us/dotnet/standard/base-types/standard-numeric-format-strings>
 - <https://docs.microsoft.com/en-us/dotnet/standard/base-types/custom-numeric-format-strings>
- `Formatter Func<float, string>`
Custom formatter to use instead of format string.

CenteredSliderScale Component

- `Scale` `Scale`
Scale gameobject.
- `Format` `string`
Format to display mark value.
 - <https://docs.microsoft.com/en-us/dotnet/standard/base-types/standard-numeric-format-strings>
 - <https://docs.microsoft.com/en-us/dotnet/standard/base-types/custom-numeric-format-strings>
- `Formatter` `Func<float, string>`
Custom formatter to use instead of format string.
- `Negative Step Rate` `float`
Multiplier for marks at negative side of the scale.
- `Positive Step Rate` `float`
Multiplier for marks at positive side of the scale.

3.5.10 Spinner

Has versions for the `int` and `float` types.

Options

- `Value Min` `int/float`
Minimal value.
- `Value Max` `int/float`
Maximal value.
- `Step` `int/float`
Step of the value.
- `SpinnerValue` `int/float`
Current value.
- `Validation` `SpinnerValidation`
Validate value on specified event.
 - `OnKeyDown`
Value checked on every key down event.
Some value ranges cannot be processed correctly with `OnKeyDown` validation.
For example `2..10` because to enter `10` you need to enter `1` and `1` is not a valid value.
 - `OnEndInput`
Value checked when editing has ended.
- `AllowHold` `bool`
Change value on button hold.

- `HoldStartDelay` `float`
Delay of hold in seconds to start change value.
- `HoldChangeDelay` `float`
Delay of hold in seconds between each change value.
- `Plus Button` `ButtonAdvanced`
Button to increase value.
- `Minus Button` `ButtonAdvanced`
Button to decrease value.

Events

- `onPlusClick` `UnityEvent`
- `onMinusClick` `UnityEvent`

Spinner Events

- `onValueChangeInt` `UnityEvent<int>`
- `onEndEditInt` `UnityEvent<int>`

SpinnerFloat Options

- `Format` `string`
Value format.
- `Decimal Separators` `char[]`
Decimal separators.
- `Number Style` `NumberStyles`
Style of the number.

SpinnerFloat Events

- `onValueChangeFloat` `UnityEvent<float>`
- `onEndEditFloat` `UnityEvent<float>`

Set maximum

```
spinner.Max = 100;
```

Set minimum

```
spinner.Min = 0;
```

Set value

```
spinner.Value = 10;
```

Set step

```
spinner.Step = 1;
```

Get value

```
Debug.Log (spinner.Value);
```

3.5.11 Time

Time24 has 24-hour format.

Time12 has 12-hour format with AM/PM toggle.

Options

- **Interactable** `bool`
User can interact with Time widget.
- **Current Time As Default** `bool`
 - **Time** `TimeSpan` (string in Inspector window)
- **Time Min** `TimeSpan` (string in Inspector window)
Minimal selectable time.
- **Time Max** `TimeSpan` (string in Inspector window)
Maximum selectable time.
- **Input Hours Adapter** `InputFieldAdapter`
InputField for the hours.
- **Input Minutes Adapter** `InputFieldAdapter`
InputField for the minutes.
- **Input Seconds Adapter** `InputFieldAdapter`
InputField for the seconds.
- **Button Hours Increase** `ButtonAdvanced`
Button to increase hours.

- **Button Hours Decrease** `ButtonAdvanced`
Button to decrease hours.
- **Button Minutes Increase** `ButtonAdvanced`
Button to increase minutes.
- **Button Minutes Decrease** `ButtonAdvanced`
Button to decrease minutes.
- **Button Seconds Increase** `ButtonAdvanced`
Button to increase seconds.
- **Button Seconds Decrease** `ButtonAdvanced`
Button to decrease seconds.
- **Allow Hold** `bool`
Allow button hold after `Hold Start Delay` to increase/decrease time with each `Hold Change Delay`.
- **Hold Start Delay** `float`
Seconds from button press to start increase/decrease on hold.
- **Hold Change Delay** `float`
Seconds to single increase/decrease during hold.
- **AMPM Button** `Button`
Button to toggle AM/PM.
- **AMPM Text Adapter** `TextAdapter`
Text to display AM/PM.

Events

- **OnTimeChanged** `UnityEvent<TimeSpan>`
The event raised when time changed.
Arguments: selected time.

3.5.12 TimeAnalog

Options

- **Interactable** `bool`
User can interact with Time widget.
- **Current Time As Default** `bool`
 - `Time TimeSpan (string in Inspector window)`
- **Time Min** `TimeSpan (string in Inspector window)`
Minimal selectable time.
- **Time Max** `TimeSpan (string in Inspector window)`

Maximum selectable time.

- `Slider CircularSlider`

Time slider.

- `Step int`

Time step at minutes.

- `AMPM Button Button`

Button to toggle AM/PM.

- `AMPM Text TextAdapter`

Text to display AM/PM.

- `Hours Labels List<GameObject>`

Hours labels, required for the styles support.

Events

- `OnTimeChanged UnityEvent<TimeSpan>`

The event raised when time changed.

Arguments: selected time.

3.6 Miscellaneous

3.6.1 ProgressbarDeterminate

Progress animation is based on *FillMethod* of the *Full Bar Mask* and *Full Bar Border*.

Options

- `Max int`

Maximum value of the progress.

- `Value int`

Current value of the progress.

- `Full Bar Mask Image`

Image to display progress. Image type should be `Filled`.

- `Full Bar Border Image`

Border image to display progress. Image type should be `Filled`.

- `Text Type ProgressbarTextTypes`

How to progress should be displayed as text.

- `None`

Does not display text.

- `Percent`

Show progress as percent like *15%*

- Range

Show progress as text like *15 / 100*

- Speed float

Animation speed in the seconds.

- Speed Type ProgressbarSpeedType

Specifies how speed should be interpreted.

- TimeToValueChangedOnOne

Speed is time to change progress on 1.

- ConstantSpeed

Speed is time to change progress from 0 to Max. If value changed from 0 to Max/2 than animation takes speed/2 seconds.

- ConstantTime

Speed is time to change progress from current value to new value.

- Unscaled Time bool

Run animation with unscaled time.

- Text Func Func<ProgressbarDeterminateBase, string>

Custom function to convert progress value to the text. Overwrites Text Type settings.

- Background Image

Background image.

- Empty Bar Image

Empty bar image.

- Full Bar Image Image

Full bar Image.

- Empty Bar Text Text

Text to display progress.

- Full Bar Text Text

Text to display progress.

Set value

```
Progressbar.Animate(value);
```

Stop animation

```
Progressbar.Stop();
```

3.6.2 ProgressbarIndeterminate

Options

- **Direction** `ProgressbarDirection`
Animation direction.
 - `Horizontal`
 - `Vertical`
- **Bar** `RawImage`
Image to animate. Use texture type `texture` and set *Wrap Mode* to repeat.
- **Border** `Image`
Border image.
- **Mask** `Image`
Mask.
- **Speed** `float`
Animation speed.
- **Unscaled Time** `bool`
Run animation with unscaled time.

Start animation

```
Progressbar.Animate();
```

Stop animation

```
Progressbar.Stop();
```

COMPONENTS

4.1 Bring to Front

Use it to bring to front selected GameObject. Commonly used with Dialog or Draggable objects.

4.1.1 Options

- With Parents `bool`

Bring to front GameObject with parents GameObjects.

4.2 Single Line and Multi Line Connectors

Draw a line between current gameobject and specified targets.

4.2.1 SingleConnector Options

- Material `Material`
- Color `Color`
- Raycast Target `bool`
- Sprite `Sprite`
- Line `ConnectorLine`
- Builder `ILineBuilder`

Builder to draw custom lines.

4.2.2 MultipleConnector Options

- `Material` `Material`
- `Color` `Color`
- `Raycast Target` `bool`
- `Sprite` `Sprite`
- `Lines` `ObservableList<ConnectorLine>`
Lines list.
- `Builder` `ILineBuilder`
Builder to draw custom lines.

4.2.3 Connector Line

- `Target` `RectTransform`
- `Start` `ConnectorPosition`
Start point of the line: Top, Bottom, Left, Right, Center.
- `End` `ConnectorPosition`
End point of the line: Top, Bottom, Left, Right, Center.
- `Type` `ConnectorType`
Line type: Straight or Rectangular.
- `Thickness` `float`
Line thickness.
- `Margin` `float`
The minimum space from the border before the turn of the line. Supported only by Rectangular lines.

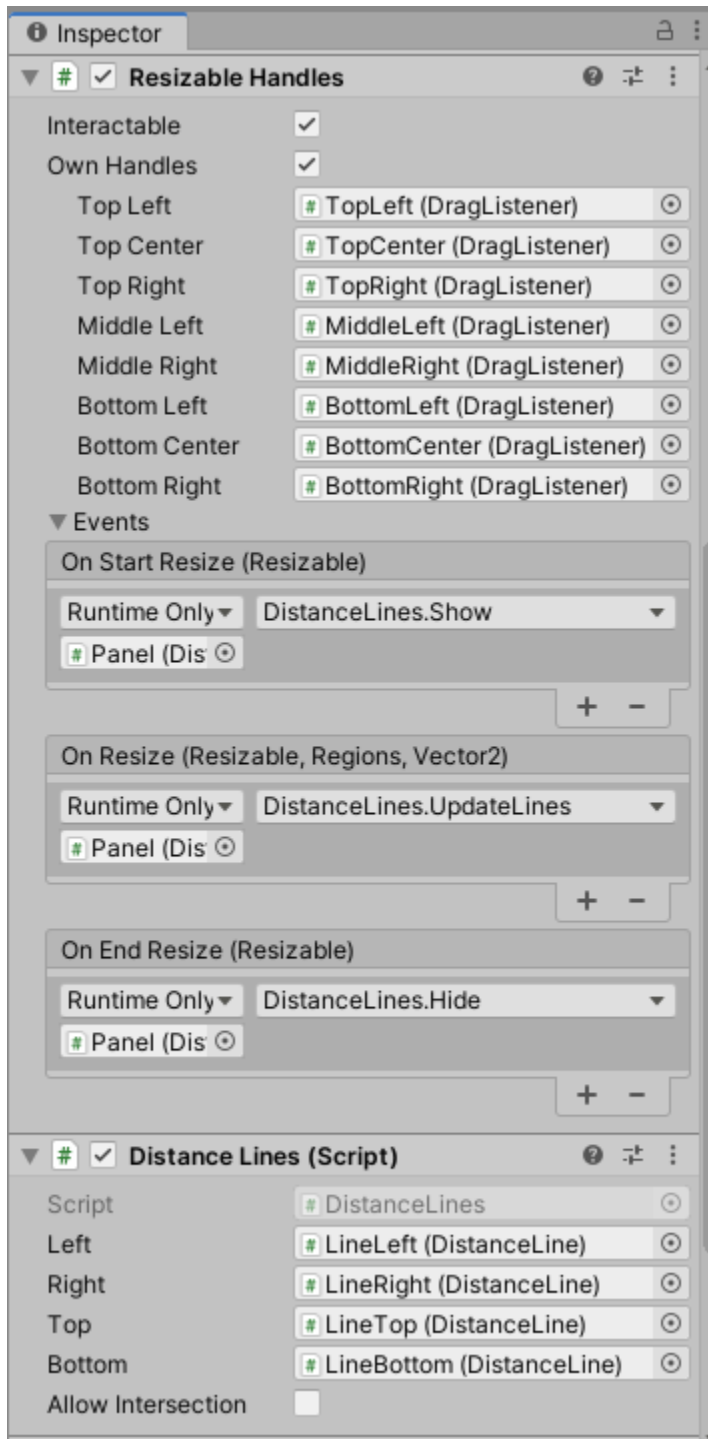

4.2.4 ILineBuilder

Interface to build connectors mesh with a single method:

```
int Build(ConnectorBase connector, RectTransform source, ConnectorLine line,
VertexHelper vh, int index)
```

4.3 Distance Lines

`Show()`, `UpdateLines()`, `Hide()` methods can be attached to appropriate events like `OnStartResize`, `OnResize`, `OnEndResize` for ease of use.

4.3.1 Options

- `Left DistanceLine` *optional*
Line from the left border of the parent.
- `Right DistanceLine` *optional*
Line from the right border of the parent.
- `Top DistanceLine` *optional*
Line from the top border of the parent.
- `Bottom DistanceLine` *optional*
Line from the bottom border of the parent.
- `Allow Intersection` `bool`
Allow lines intersection.
If disabled lines are drawn from parent border to the nearest Target border; otherwise from parent border to the same Target border.

4.4 Drag and Drop components

4.4.1 Drag-and-Drop Support for the Collections

Different drag-and-drop components used with different widgets. Default widgets already have drag-and-drop components. For the generated widgets drag-and-drop components create automatically. Default Drag components usually attached to `DefaultItem`. Default Drop components usually attached to widgets and `TreeView.DefaultItem`.

Drag will be cancelled with `OnCancel` event from `EventSystem` (for example by pressing *Esc*).

You can remove drag-and-drop components from the widgets gameobjects to disable drag-and-drop functionality.

4.4.2 Collections Drag Options

- `Allow Drag` `bool`
Allow drag.
- `Handle DragSupportHandle` *optional*
Custom handle to drag, it not specified will be dragged by current instance.
- `ListView TListView` *optional*
ListView instance.
Not available for `TreeView`.
- `DragInfo TComponent` *optional*
Component to display the dragged data.
- `DragInfo Offset` `Vector3`
Offset from the cursor position for the `DragInfo`.
- `Delete After Drop` `bool`
Delete item from collection after drop.

Not available for `TreeView`.

- `Allow Drop Cursor Texture2D` *optional*
Cursor when drop allowed.
- `Allow Drop Cursor Hot Spot Vector2`
Cursor hot spot.
- `Denied Drop Cursor Texture2D` *optional*
Cursor when drop denied.
- `Denied Drop Cursor Hot Spot Vector2`
Cursor hot spot.
- `Default Cursor Texture Texture2D` *optional*
Default cursor.
- `Default Drop Cursor Hot Spot Vector2`
Cursor hot spot.

4.4.3 Collections Drop Options

- `Drop Position NearestType`
Drop position.
 - `Auto` insert dropped item to the nearest position.
 - `Before` insert dropped item before item under pointer.
 - `After` insert dropped item after item under pointer.
- `Drop Indicator ListViewDropIndicator`
Indicator to display position where dropped item will be inserted.
- `Delete Node After Drop bool`
Delete dropped node from `TreeView`.
Not available for `TreeView`.
- `Receive Items bool`
Receive dropped items.
- `Receive Nodes bool`
Receive dropped nodes.

4.4.4 TreeView Drop Options

- Drop Position `NearestType`
Drop position.
 - Auto insert dropped item to the nearest position
 - Before insert dropped item before item under pointer
 - After insert dropped item after item under pointer
- Drop Indicator `ListViewDropIndicator`
Indicator to display position where dropped item will be inserted.
- Receive Items `bool`
Receive dropped items.
- Receive Nodes `bool`
Receive dropped nodes.

4.4.5 TreeView Node Drop Options

- Drop Indicator `ListViewDropIndicator`
Indicator to display position where dropped item will be inserted.
- Delete Node After Drop `bool`
Delete dropped node from TreeView.
- Receive Items `bool`
Receive dropped items.
- Reorder Area `float`
Distance in percent of height from border to add dropped node before/after instead of drop as sub-node. Allowed value range is 0f..0.5f

4.4.6 Custom Drag Support

You can add own drag support with component inherited from `DragSupport<TItem>` implementation.

Methods

- `InitDrag(PointerEventData eventData)` *required*: set Data value to drag
- `Dropped(bool success)` *optional*: what to do after the drop happened or canceled

Here is basic example of the drag support for the `InputField`:

```
namespace UIWidgets.Examples
{
    using UnityEngine;
    using UnityEngine.EventSystems;
    using UnityEngine.UI;

    /// <summary>
    /// Drag support for the InputField.

```

(continues on next page)

(continued from previous page)

```

/// </summary>
[RequireComponent(typeof(InputField))]
public class InputFieldDragSupportBase : DragSupport<string>
{
    /// <summary>
    /// Set Data, which will be passed to the Drop component.
    /// </summary>
    /// <param name="eventData">Current event data.</param>
    protected override void InitDrag(PointerEventData eventData)
    {
        Data = GetComponent<InputField>().text;
    }
}

```

This example show how to display draggable data:

```

namespace UIWidgets
{
    using UnityEngine;
    using UnityEngine.EventSystems;
    using UnityEngine.Serialization;
    using UnityEngine.UI;

    /// <summary>
    /// Drag support for the InputField.
    /// </summary>
    [RequireComponent(typeof(InputField))]
    public class InputFieldDragSupport : DragSupport<string>
    {
        /// <summary>
        /// Set Data, which will be passed to Drop component.
        /// </summary>
        /// <param name="eventData">Current event data.</param>
        protected override void InitDrag(PointerEventData eventData)
        {
            Data = GetComponent<InputField>().text;

            ShowDragInfo();
        }

        /// <summary>
        /// Called after the drop completed.
        /// </summary>
        /// <param name="success">true if Drop component received data; otherwise,
        ↪ false.</param>
        public override void Dropped(bool success)
        {
            HideDragInfo();

            base.Dropped(success);
        }

        /// <summary>
        /// Component to display draggable info.
        /// </summary>
        [SerializeField]

```

(continues on next page)

(continued from previous page)

```
public GameObject DragInfo;

/// <summary>
/// DragInfo offset.
/// </summary>
[SerializeField]
public Vector3 DragInfoOffset = new Vector3(-5, 5, 0);

/// <summary>
/// Start this instance.
/// </summary>
protected virtual void Start()
{
    if (DragInfo != null)
    {
        DragInfo.SetActive(false);
    }
}

/// <summary>
/// Shows the drag info.
/// </summary>
protected virtual void ShowDragInfo()
{
    if (DragInfo == null)
    {
        return;
    }

    DragInfo.transform.SetParent(DragPoint, false);
    DragInfo.transform.localPosition = DragInfoOffset;

    DragInfo.SetActive(true);

    DragInfo.GetComponentInChildren<Text>().text = Data;
}

/// <summary>
/// Hides the drag info.
/// </summary>
protected virtual void HideDragInfo()
{
    if (DragInfo == null)
    {
        return;
    }

    DragInfo.SetActive(false);
}
}
```

4.4.7 Custom Drop Support

You can add own the drop support with `IDropSupport<TItem>>` implementation.

Methods

- `CanReceiveDrop(TItem data, PointerEventData eventData)`: determine if the drop can be accepted or not, can used to display the drop preview.
- `Drop(TItem data, PointerEventData eventData)`: process the dropped data.
- `DropCanceled(TItem data, PointerEventData eventData)`: process the cancelled drop, can used to hide the drop preview or the drop indicator.

Here is example code shows how to add `TreeNode<TreeViewItem>` and `string` drop support to the `InputField`, after drop `InputField` value would be set to the dropped node name or the dropped string.

`CanReceiveDrop` function allows to accept only nodes with names ends with `I`.

```
namespace UIWidgets.Examples
{
    using UnityEngine;
    using UnityEngine.UI;
    using UnityEngine.EventSystems;

    /// <summary>
    /// TreeNode drop support for the InputField.
    /// </summary>
    [RequireComponent(typeof(InputField))]
    public class InputFieldDropSupport : MonoBehaviour, IDropSupport<TreeNode
    <TreeViewItem>>, IDropSupport<string>
    {
        /// <summary>
        /// InputField.text value before drop.
        /// Can be used to swap content with drag source.
        /// </summary>
        public string OriginalData;

        #region IDropSupport<string>

        /// <summary>
        /// Handle dropped data.
        /// </summary>
        /// <param name="data">Data.</param>
        /// <param name="eventData">Event data.</param>
        public void Drop(string data, PointerEventData eventData)
        {
            var input = GetComponent<InputField>();
            OriginalData = input.text;
            input.text = data;
        }

        /// <summary>
        /// Determines whether this instance can receive drop with the specified data_
    and eventData.
        /// </summary>
        /// <returns>true if this instance can receive drop with the specified data and_
    eventData; otherwise, false.</returns>
        /// <param name="data">Data.</param>
        /// <param name="eventData">Event data.</param>
```

(continues on next page)

(continued from previous page)

```

public bool CanReceiveDrop(string data, PointerEventData eventData)
{
    return true;
}

/// <summary>
/// Handle canceled drop.
/// </summary>
/// <param name="data">Data.</param>
/// <param name="eventData">Event data.</param>
public void DropCanceled(string data, PointerEventData eventData)
{
}

#endregion

#region IDropSupport<TreeNode<TreeViewItem>>

/// <summary>
/// Handle dropped data.
/// </summary>
/// <param name="data">Data.</param>
/// <param name="eventData">Event data.</param>
public void Drop(TreeNode<TreeViewItem> data, PointerEventData eventData)
{
    var input = GetComponent<InputField>();
    OriginalData = input.text;
    input.text = data.Item.Name;
}

/// <summary>
/// Determines whether this instance can receive drop with the specified data_
↪and eventData.
/// </summary>
/// <returns>true if this instance can receive drop with the specified data and_
↪eventData; otherwise, false.</returns>
/// <param name="data">Data.</param>
/// <param name="eventData">Event data.</param>
public bool CanReceiveDrop(TreeNode<TreeViewItem> data, PointerEventData_
↪eventData)
{
    return data.Item.Name.EndsWith("1");
}

/// <summary>
/// Handle canceled drop.
/// </summary>
/// <param name="data">Data.</param>
/// <param name="eventData">Event data.</param>
public void DropCanceled(TreeNode<TreeViewItem> data, PointerEventData_
↪eventData)
{
}

#endregion
}

```

4.4.8 Swapping content between Drag and Drop components

Original content of the drop component saved to `IDropSupport<T>.OriginalData` field. And content should be swapped in the `DragSupport<T>.OnEndDrag()` function

```
namespace UIWidgets.Examples
{
    using UnityEngine;
    using UnityEngine.EventSystems;
    using UnityEngine.UI;

    /// <summary>
    /// Drag support with content swap for the InputField.
    /// </summary>
    [RequireComponent(typeof(InputField))]
    public class InputFieldDragSwapSupport : InputFieldDragSupport
    {
        /// <summary>
        /// Called by a BaseInputModule when a drag is ended.
        /// </summary>
        /// <param name="eventData">Current event data.</param>
        public override void OnEndDrag(PointerEventData eventData)
        {
            if (!IsDragged)
            {
                return;
            }

            var target = FindTarget(eventData);
            if (target != null)
            {
                target.Drop(Data, eventData);
                Dropped(true);

                // replace dragged text with drop target text
                GetComponent<InputField>().text = (target as InputFieldDropSupport).
↪OriginalData;
            }
            else
            {
                Dropped(false);
            }

            IsDragged = false;
            Cursor.SetCursor(DefaultCursorTexture, DefaultCursorHotSpot, Compatibility.
↪GetCursorMode());
        }
    }
}
```

4.4.9 Adding limitations to the Drop component

In this example, ListViewIcons will receive drag-and-drop data only if DataSource.Count less than MaxQuantity.

```
namespace UIWidgets.Examples
{
    using UnityEngine;
    using UnityEngine.EventSystems;

    public class ListViewIconsDropSupportLimitedQuantity : ListViewIconsDropSupport
    {
        [SerializeField]
        public int MaxQuantity = 10;

        public override bool CanReceiveDrop(ListViewIconsItemDescription data, ↩
        ↪PointerEventData eventData)
        {
            // disable drop if quantity limit reached
            if ((MaxQuantity >= 0) && (ListView.DataSource.Count >= MaxQuantity))
            {
                return false;
            }

            return base.CanReceiveDrop(data, eventData);
        }
    }
}
```

4.5 Draggable

Dragging gameobject.

4.5.1 Options

- Interactable `bool`
Allow interaction.
- Handle `GameObject` *optional*
GameObject used to drag current GameObject.
- Horizontal `bool`
Allow horizontal drag movement.
- Vertical `bool`
Allow vertical drag movement.
- Restriction `DraggableRestriction`:
 - None: no restriction.
 - Strict: does not allow drag outside the parent.
 - After Drag: does not allow drag outside the parent, applied after drag ended.
- Curve `AnimationCurve`

Animation curve used to animate applied **After Drag** restriction.

- `UnscaledTime` `bool`

Run animation with unscaled time.

4.5.2 Properties

- `Target RectTransform`

Target to drag; the self is by default.

4.5.3 Events

- `OnStartDrag` `UnityEvent<Draggable>`
- `OnDrag` `UnityEvent<Draggable>`
- `OnEndDrag` `UnityEvent<Draggable>`

4.6 EasyLayout

EasyLayout provides different layouts that not available with default layout groups.

4.6.1 Options

- `Main Axis` `Axis`

Determine how elements will be placed (at horizontal or vertical direction first).

- `Layout Type` `LayoutTypes`

- `Compact`: Compactly places the elements.
- `Grid`: Places elements in the grid. Cell size is not fixed and depend on elements sizes in the same row and column.
- `Flex`: Places elements like CSS flexbox layout.
- `Staggered`: Places elements one-by-one to the shortest column or row depending on the main axis.
- `Ellipse`: Places elements one-by-one on the border of the ellipse or the circle starting from `Angle` `Start` and `Angle` `Step` distance between items.

- `Group Position` `Anchors`

Only for the `Compact` and `Grid` layouts.

Combination of horizontal (`Left`, `Center`, `Right`) and vertical (`Upper`, `Middle`, `Lower`) positions.

Elements combine to the group, this option specifies group position relative to the parent.

- `Row Align` `HorizontalAligns`

Only for the `Compact` layout.

Element position in the row (`Left`, `Center`, `Right`).

- `Inner Align` `InnerAligns`

Only for the Compact layout.

Column position relative to the group (Top, Middle, Bottom).

- Compact Constraint CompactConstraints

Only for the Compact layout.

- Flexible: Rows and columns count depends on the parent size.
- Max Column Count
- Max Row Count

- Compact Constraint Count int

Only for the Compact layout.

Max count of the rows or columns for the Compact Constraint option.

- Cell Align Anchors

Only for the Grid layout.

Elements position relative to the cell size. Same as Group Position.

- Grid Constraint GridConstraints

Only for the Grid layout.

- Flexible: Rows and columns count depends on the parent size.
- Fixed Column Count
- Fixed Row Count

- Grid Constraint Count int

Only for the Grid layout.

Count of the rows or columns for the Grid Constraint option.

- Flex Setting EasyLayoutFlexSettings

Only for the Flex layout.

- Wrap bool

If disabled elements will all placed onto one line (row or column).
- Justify Content EasyLayoutFlexSettings.Content

Alignment along the main axis. Also distribute extra free space on the main axis.

 - * Start: elements placed at the start of the line.
 - * Center: elements placed at the center of the line.
 - * End: elements placed at the end of the line.
 - * Space Between: first element at the start of the line, last element at the end of the line, other elements placed between them with evenly spacing.
 - * Space Around: first and last elements are placed with $1n$ space from the edges, other elements placed with $2n$ space between them.
 - * Space Evenly: elements are placed so that the spacing between any two element and the space to the edges is equal.
- Align Content EasyLayoutFlexSettings.Content

Alignment of the lines (columns or rows) along the cross axis. Also distribute extra free space on the cross axis.

- * `Start`: lines placed to the start of the parent.
- * `Center`: lines placed to the center of the parent.
- * `End`: lines placed to the end of the parent.
- * `Space Between`: first line to the start of the parent, last line to the end of the parent, other lines placed between them with evenly spacing.
- * `Space Around`: first and last lines are placed with $1n$ space from the edges, other lines placed with $2n$ space between them.
- * `Space Evenly`: line are placed so that the spacing between any two lines and the space to the edges is equal.

– `Align Items EasyLayoutFlexSettings.Items`

Define how elements are placed out along the cross axis on the line (column or row).

- * `Start`
- * `Center`
- * `End`

• `Staggered Settings EasyLayoutStaggeredSettings`

Only for the `Staggered` layout.

– `Fixed Block Count bool`

Count of the rows or columns.

– `Blocks Count int`

• `Ellipse Settings EasyLayoutEllipseSettings`

Only for the `Ellipse` layout.

Set equal width and height for the circle layout.

`RectTransform` pivot is used as the center of the ellipse.

– `Width Auto bool`

`RectTransform` width is used as the width of the ellipse.

– `Width float`

Ellipse width if `Width Auto` disabled.

– `Height Auto bool`

`RectTransform` height is used as the height of the ellipse.

– `Height float`

Ellipse height if `Height Auto` disabled.

– `Angle Start float`

Position of the first element in the degrees.

– `Angle Step Auto bool`

Are elements placed with equal angular distance or specified `Angle Step`?

- Angle Step float
 - Elements placed with specified angular distance between neighbour elements.
- Fill EllipseFill
 - Determines how to calculate the distance between elements if Angle Step Auto enabled.
 - * Closed: angular distance is 360 degrees divided into the elements count; distance is the same between the first and last elements.
 - * Arc: angular distance is arc length divided into the elements count minus one
- Arc Length float
 - Distance between first and last elements if Angle Step Auto enabled and Fill is Arc.
 - Can be more than 360 degrees.
- Align EllipseAlign
 - Determines how elements are placed on the ellipse border.
 - * Outer: right borders of the elements are placed on the ellipse border.
 - * Center: center of the elements are placed on the ellipse border.
 - * Inner: left borders of the elements are placed on the ellipse border.
- ElementsRotate bool
 - Rotate elements according to position or not.
- ElementsRotationStart float
 - Initial rotation of the elements.
- Spacing Vector2
 - Empty space between elements.
 - Can be more than specified value for Flex layout.
- Symmetric bool
 - Use symmetric margin.
- Margin Vector2
 - Empty space from parent edges.
- Skip Inactive bool
 - Do not reserve space for disabled elements.
- Right To Left bool
 - The order of placement of elements.
- Top To Bottom bool
 - The order of placement of elements.
- ResetRotation bool
 - Reset rotation of the elements to 0.
- Children Width ChildrenSize

- Do nothing: do not resize elements.
- Set Preferred: set element width to Preferred Width.
- Set Max From Preferred: set maximum of the Preferred Width from the all elements.
- Fit Container: change children size in range from minimal to preferred to fit container.
- Set Preferred and Fit Container: set children size to preferred, then increase size proportionally Flexible Width to fit parent width if required.
- Shrink On Overflow: decrease elements width if summary width more than parent width including margin.

- Children Height ChildrenSize

Similar to Children Width

4.6.2 Events

- Settings Changed UnityEvent

Event, raised after any setting was changed.

4.7 Groupable

Allows to select a group of the gameobjects; and then resize, rotate, align all of them simultaneously.

Can select only elements with the same parent as the Groupable component.

Shared components settings between Groupable and the selected elements:

- Resizable.KeepAspectRatio
- Rotatable.LimitRotation
- Rotatable.AngleMin
- Rotatable.AngleMax
- Rotatable.AngleStep

4.7.1 Options

- Interactable bool

Allow interaction.

- Highlight Template RectTransform *optional*

Template to highlight selected gameobjects.

- Selection Mode Groupable.Mode

Selection mode.

- Contains

Selects only gameobjects fully inside the selection area.

- Overlaps

Selects gameobjects inside the selection area or partially overlaps the selection area.

- `Group Rotation bool`

If enabled selected gameobjects will be rotated as part of the group; otherwise each separately.

4.7.2 Events

- `OnStartSelection UnityEvent<Groupable>`
- `OnSelection UnityEvent<Groupable>`
- `OnEndSelection UnityEvent<Groupable>`

4.8 Layout Switcher

Allows creating different layouts with the same GameObjects for different screen sizes and aspect ratios. Used when anchors, pivots and layout groups not enough to create a layout with different aspect ratios support.

Saves the values of the position, size, anchors, pivot, rotation, scale, active/disable state for each layout.

4.8.1 Options

- `Objects List<RectTransform>`

List of the controlled objects.

- `Default Display Size (inches) float`

Display size to use when actual display size cannot be detected.

- `Layouts List<UILayout>`

List of the layouts.

- `Name string`

Layout name.

- `Aspect Ratio Vector2`

Aspect ratio for this layout.

- `Max Display Size (inches) float`

Maximum size of the display for this layout (layout will not be used if display size more than the specified one).

4.8.2 Events

- `LayoutChanged UnityEvent<UILayout>`

4.9 Lightbox

Lightbox is a component used to display overlay image.

4.10 ListViewAutoResize

Auto-resizes ListView or TileView according to items counts until specified maximum size reached.

4.10.1 Options

- `MaxSize float`
Maximum size.
- `UpdateRectTransform size`
Set RectTransform size.
- `UpdateLayoutElement`
Set LayoutElement min size.

4.11 Object Sliding

Component to drag GameObject horizontally or vertically between specified positions.

4.11.1 Options

- `Interactable bool`
Allow interaction.
- `Positions List<float>`
Allowed positions for this object.
- `Direction ObjectSlidingDirection`
Slide direction.
 - `Horizontal`
 - `Vertical`
- `Movement AnimationCurve`
Animation curve.
- `Unscaled Time bool`
Animate with unscaled time.

4.11.2 Helper components

This components used to automatically set *Positions* instead of the manual input.

- Object Sliding Horizontal Helper
 - Object on Left `List<RectTransform>`
List of the objects on the left side of the current object.
 - Object on Right `List<RectTransform>`
List of the objects on the right side of the current object.
- Object Sliding Vertical Helper
 - Object on Top `List<RectTransform>`
List of the objects on the top side of the current object.
 - Object on Bottom `List<RectTransform>`
List of the objects on the bottom side of the current object.

4.12 Pinchable

Allows drag/resize/rotate gameobject with multi-touches.

4.12.1 Options

- `Interactable bool`
Allows users interaction.
- `AllowDrag bool`
Allows drag.
- `AllowResize bool`
Allows resize.
- `AllowRotate bool`
Allows rotation.

4.12.2 Events

- `OnStartPinch UnityEvent<Pinchable>`
- `OnPinch UnityEvent<Pinchable>`
- `OnEndPinch UnityEvent<Pinchable>`

4.13 Resizable

Allows resizing gameobject by size or scale.

4.13.1 Options

- `Interactable bool`
Allow users to change the size of the GameObject.
- `Resize Directions Resizable.Directions`
Allowed resizing directions.
- `Type ResizeType`
Resize type.
 - `Size`
Resize by changing size of the gameobject.
 - `Scale`
Resize by changing scale of the gameobject.
- `IncludeCorners bool`
Allow resize when cursor in the one of the corners. Should be disabled to use together with *Rotatable* component.
- `IntegerSize bool`
If enabled size is rounded to the integer number. Reason: size can be float number if gameobject is rotated.
- `Update RectTransform bool`
Change RectTransform size.
- `Update LayoutElement bool`
Change LayoutElement size.
- `Active Region float`
Distance from border where resize allowed.
- `Min Size Vector2`
Minimal size in points, for the `Scale` type limits is checked against $width * scale.x$ and $height * scale.y$.
- `Max Size Vector2`
Maximum size in points, for the `Scale` type limits is checked against $width * scale.x$ and $height * scale.y$.
Not applied if size is zero.
- `Keep Aspect Ratio bool`
Aspect ratio applied after `MinSize` and `MaxSize`, so if default aspect ratio not equal `MinSize` and `MaxSize` aspect ratio then real size may be outside limit with one of the axis.

4.13.2 Events

- `OnStartResize` `UnityEvent<Resizable>`
- `OnResize` `UnityEvent<Resizable>`
- `OnEndResize` `UnityEvent<Resizable>`
- `OnResizeDirectionsChanged` `UnityEvent<Resizable>`

4.13.3 Properties

- `Target RectTransform`
Target to resize; the self is by default.

4.13.4 Resize Children With Parent

There are a few ways to resize children with parent:

- Use `RectTransform anchors` to set children size relative to parent with padding from borders.
Probably setting anchors to horizontal stretch (for the labels or buttons) or horizontal and vertical stretch (for the long text or `ListView`) will be enough.
[Video](#) about anchors.
- Add `Layout Group` (`Horizontal Layout Group`, `Vertical Layout Group`, `Grid Layout Group`, [EasyLayout](#)) to parent with enabled `Control Child Size` options.
It is a more complex way, and it will be harder to achieve the desired result.
If you want to add/remove/enable/disable children from a script and automatically reposition them after this, then `Layout Group` is the right way to do this.

4.14 Resizable Handles

Helper component with handles to resize for the [Resizable](#).

4.14.1 Options

- `Interactable` `bool`
Allow users to change the size of the `GameObject`.
- `Own Handles` `bool`
If enabled you can specify your own handles for the current component.
If disabled you can specify `Handles Source` for current component, this allows you to create a single set of handles instead of duplicate them for each component.
Handles should be acquired with `GetSourceHandles()` and returned with `ReleaseSourceHandles()` functions.
- `Handles Source` `ResizableHandles`
Handles source to use if `Own Handles` disabled.

- `Top Left DragListener` *optional*
Top left handle.
- `Top Center DragListener` *optional*
Top center handle.
- `Top Right DragListener` *optional*
Top right handle.
- `Middle Left DragListener` *optional*
Middle left handle.
- `Middle Right DragListener` *optional*
Middle right handle.
- `Bottom Left DragListener` *optional*
Bottom left handle.
- `Bottom Center DragListener` *optional*
Bottom center handle.
- `Bottom Right DragListener` *optional*
Bottom right handle.

4.14.2 Events

- `OnStartResize` `UnityEvent<Resizable>`
- `OnResize` `UnityEvent<Resizable>`
- `OnEndResize` `UnityEvent<Resizable>`

4.15 Rotatable

Allows rotating gameobject around its pivot.

4.15.1 Options

- `Interactable` `bool`
Allow users to change the rotation of the `GameObject`.
- `Rotate Directions` `Rotatable.Directions`
Allowed corners to apply the rotation.
- `Active Region` `float`
Distance from border where rotation allowed.
- `Limit Rotation` `bool`
Allows rotating objects only with the specified angles range.
 - `Angle Min` `float`

Allowed value is in range [-180..180].

- Angle Max float

Allowed value is in range [-180..180].

- Angle step float

Allowed value is in range [0..180). Set 0 to disable.

- CursorTopLeftTexture Texture2D *optional*

Cursor texture for the enabled rotation in the top right corner.

- CursorTopLeftHotSpot Vector2

The offset from the top left of the CursorTopLeftTexture to use as the target point (must be within the bounds of the cursor).

- CursorTopRightTexture Texture2D *optional*

Cursor texture for the enabled rotation in the top right corner.

- CursorTopRightHotSpot Vector2

The offset from the top left of the CursorTopRightHotSpot to use as the target point (must be within the bounds of the cursor).

- CursorBottomLeftTexture Texture2D *optional*

Cursor texture for the enabled rotation in the top right corner.

- CursorBottomLeftHotSpot Vector2

The offset from the top left of the CursorBottomLeftHotSpot to use as the target point (must be within the bounds of the cursor).

- CursorBottomRightTexture Texture2D *optional*

Cursor texture for the enabled rotation in the top right corner.

- CursorBottomRightHotSpot Vector2

The offset from the top left of the CursorBottomRightHotSpot to use as the target point (must be within the bounds of the cursor).

- DefaultCursorTexture Texture2D *optional*

Default cursor texture.

- DefaultCursorHotSpot Vector2

The offset from the top left of the DefaultCursorTexture to use as the target point (must be within the bounds of the cursor).

4.15.2 Events

- OnStartRotate UnityEvent<Rotatable>
- OnRotate UnityEvent<Rotatable>
- OnEndRotate UnityEvent<Rotatable>

4.15.3 Properties

- `Target RectTransform`
Target to rotate; the self is by default.

4.16 Rotatable Handle

Helper component with handle to rotate for the *Rotatable*.

4.16.1 Options

- `Interactable bool`
Allow users to change the rotation of the `GameObject`.
- `Own Handle bool`
If enabled you can specify your own handle for the current component.
If disabled you can specify Handle Source for current component, this allows you to create a single handle instead of duplicate it for each component.
Handle should be acquired with `GetSourceHandle()` and returned with `ReleaseSourceHandle()` functions.
- `Handle Source RotatableHandle`
Handle source to use if `Own Handle` disabled.
- `Handle DragListener optional`
Handle.

4.16.2 Events

- `OnStartRotate UnityEvent<Rotatable>`
- `OnRotate UnityEvent<Rotatable>`
- `OnEndRotate UnityEvent<Rotatable>`

4.17 Scrollbar Min Size

Allow to set minimal scrollbars sizes of the `ScrollRect`.

4.17.1 Options

- `Horizontal Min Size float`
Minimal size of the horizontal scrollbar.
- `Vertical Min Size float`
Minimal size of the vertical scrollbar.

4.18 ScrollRect Events

Provide pull events for the ScrollRect.

4.18.1 Options

- `Thresholds PullThreshold`
Separate thresholds values for each pull direction to raise events.

4.18.2 Events

- `OnPull UnityEvent<PullDirection>`
- `OnPullAllowed UnityEvent<PullDirection>`
- `OnPullCancel UnityEvent<PullDirection>`
- `OnPulling UnityEvent<ScrollRectEvents, PullDirection>`
- `OnPullUp UnityEvent`
- `OnPullDown UnityEvent`
- `OnPullLeft UnityEvent`
- `OnPullRight UnityEvent`

4.19 ScrollRect Footer

Footer for the ScrollRect; visible when scrolled to the bottom.

4.19.1 Options

- `ScrollRect ScrollRect`
ScrollRect.
- `Block RectTransform`
Actual footer block.
- `IsHorizontal bool`
ScrollRect direction.

- `DisplayType ScrollRectHeaderType`

Display type.

- `Reveal`

Show block when scrolled to the bottom and hide on scroll up.

- `Resize`

Resize block from current size at the bottom to the minimal size on scroll up.

- `MinSize float`

Minimal size of the footer.

4.20 ScrollRect Header

Header for the `ScrollRect`; visible when scrolled to the top.

4.20.1 Options

- `ScrollRect ScrollRect`

`ScrollRect`.

- `Block RectTransform`

Actual header block.

- `IsHorizontal bool`

`ScrollRect` direction.

- `DisplayType ScrollRectHeaderType`

Display type.

- `Reveal`

Show block when scrolled to the top and hide on scroll down.

- `Resize`

Resize block from current size at the top to the minimal size on scroll down.

- `MinSize float`

Minimal size of the header.

4.21 Selectable Helper

Selectable works only with one Graphic component, Selectable Helper allows to control more Graphic components.

4.22 Splitter

Resize neighboring or specified gameobjects on drag. Should be used with layout group.

4.22.1 Options

- `Interactable` `bool`
Allow users to interact with the splitter.
- `Type` `SplitterType`
 - `Horizontal`: change heights of the gameobjects.
 - `Vertical`: change widths of the gameobjects.
- `Update RectTransform` `bool`
Change `RectTransform` size of the left and right gameobjects.
- `Update LayoutElement` `bool`
Change `LayoutElement` size of the left and right gameobjects.
- `Mode` `SplitterMode`
 - `Auto`: use previous and next siblings in hierarchy.
 - `Manual`: use specified targets to resize.
- `Previous Object RectTransform`
Left (or top) object to resize.
- `Next Object RectTransform`
Right (or bottom) object to resize.

4.22.2 Events

- `OnStartResize` `UnityEvent<Splitter>`
- `OnResize` `UnityEvent<Splitter>`
- `OnEndResize` `UnityEvent<Splitter>`

4.23 Switch Group

Same as `Toggle Group`, but for the `Switch` widget.

4.23.1 Options

- Allow Switch Off `bool`

Is it allowed that no switch is on? If this option is enabled, pressing the switch that is currently on will change it to off, so that no switch is on. If this setting is disabled, pressing the switch that is currently on will not change its state.

4.24 Table Header

Used with `ListView` on table mode. Allows to resize and reorder columns.

Important: `TableHeader` and the `ListView.DefaultItem` should have same amount of the children `GameObjects` (cells count should match with header cells count).

4.24.1 Options

- Interactable `bool`

Allow interaction.

- List `ListViewBase`

Controlled `ListView`.

- Allow Resize `bool`

Allow to change columns width.

- Allow Reorder `bool`

Allow to change columns order.

- On Drag Update `bool`

Update column width during drag, if disabled column width will be changed after the drag ended.

- Active Region `float`

Distance from border where resize allowed.

- Drop Indicator `LayoutDropIndicator`

Indicator to display new column position during column reordering.

4.24.2 Get Current Columns Order

```
// index is the original position of the column
// value is the current position of the column
var order = tableHeader.GetColumnsOrder();
```

4.24.3 Change Columns Order

```
var order = new List<int>(2, 1, 0);
tableHeader.SetColumnsOrder(order);
```

4.24.4 Restore Original Columns Order

```
tableHeader.RestoreColumnsOrder();
```

4.24.5 Disable Column

```
var column = 0;
tableHeader.ColumnDisable(column);
```

4.24.6 Enable Column

```
var column = 0;
tableHeader.ColumnEnable(column);
```

Add/Remove Column at Runtime

```
var order = tableHeader.GetColumnsOrder();
tableHeader.RestoreColumnsOrder();

// add new column to the header
new_column_header.SetParent(tableHeader.transform);
new_column_header.SetSiblingIndex(...);
order.Insert(..., ...);

// or remove column
Destroy(tableHeader.transform.GetChild(index));
order.RemoveAt(...);
tableHeader.Refresh()

// new DefaultItem with another set of cells
listView.DefaultItem = newDefaultItem;

// modify order with new column index or deleted column index and set it back
tableHeader.SetColumnsOrder(order);
```

4.25 Tooltip

Displaying the tooltip on object focus.

4.25.1 Options

- `Tooltip Object GameObject`
GameObject used as tooltip.
- `Bring To Front bool`
Bring tooltip object to front.
- `Show Delay float`
Delay in seconds before tooltip displayed.
- `Unscaled Time bool`
Delay with unscaled time.

4.25.2 Events

- `OnShow UnityEvent`
- `OnHide UnityEvent`

4.26 TreeView data source

Used in editor mode, allow to edit TreeView nodes.

Important: Work only with default TreeView. Custom TreeView's are not supported.

5.1 Flare Effect

Shader based. Create material with *Custom / New UI Widgets / UIFlareTransparent* or *Custom / New UI Widgets / UIFlareGlobal* shader and set it to `Image` component.

Note: *UIFlareGlobal* works only in Render Mode = Screen Space - Overlay.

5.1.1 Options

- Flare Color `Color`
Color of the flare.
- Flare Size `float`
Size of the flare in range [0..1].
- Flare Speed `float`
Speed of the flare relative to the image size: how much times it will move from left to right in one second.
- Flare Delay `float`
Delay between appearances of the flare. Examples:
 - 0 - no delay
 - 1 - delay is travel time from left to right
 - 2 - delay is doubled travel time from left to right

5.2 Ring Effect

Draw ring or circle. Shader based effect. To use add `RingEffect` component to gameobject with `Graphic` component.

Note: Some Unity versions (like 2017.4) requires enabled `TexCoord1` at `Canvas.AdditionalShaderChannells`.

5.2.1 Options

- `Ring Color Color`
Color of the ring.
- `Thickness float`
Ring thickness.
- `Padding float`
Padding from border.
- `Transparent Background bool`
Change color of the `Graphic` component to transparent.

5.3 Ripple Effect

Draw ripples on the click position. Maximum 10 ripples per gameobject. Shader based effect. To use add `RippleEffect` component to gameobject with `Graphic` component.

Note: Some Unity versions (like 2017.4) requires enabled `TexCoord1` at `Canvas.AdditionalShaderChannells`.

5.3.1 Options

- `Start Color Color`
Initial color of the ripple.
- `End Color Color`
End color of the ripple.
- `Speed float`
Growth speed of the ripple.
- `Max Size float`
Maximum size of the ripple in range [0..1].

5.4 Tsunami Effect

`RectTransform` size is changed from `MinSize` to `MaxSize` with distance from gameobject to the pointer. To use add `TsunamiEffect` component.

5.4.1 Options

- `MinSize` `Vector2`
Minimal size of the component.
- `MaxSize` `Vector2`
Maximum size of the component.
- `Distance` `float`
Effect distance.

SHADERS

6.1 Gradient Shaders

Those are shaders used by `ColorPicker`. Use `ColorHSV.ShaderColor` to set colors for the HSV shaders.

- `UIGradientHLineHSV`

The horizontal gradient between the two colors. HSV color model.

- `UIGradientHLineRGB`

The horizontal gradient between the two colors. RGB color model.

- `UIGradientVLineHSV`

The vertical gradient between the two colors. HSV color model.

- `UIGradientVLineRGB`

The vertical gradient between the two colors. RGB color model.

- `UIGradientPlaneHSV`

The plane gradient between the four colors, each color in the own corner. HSV color model.

- `UIGradientPlaneRGB`

The plane gradient between the four colors, each color in the own corner. RGB color model.

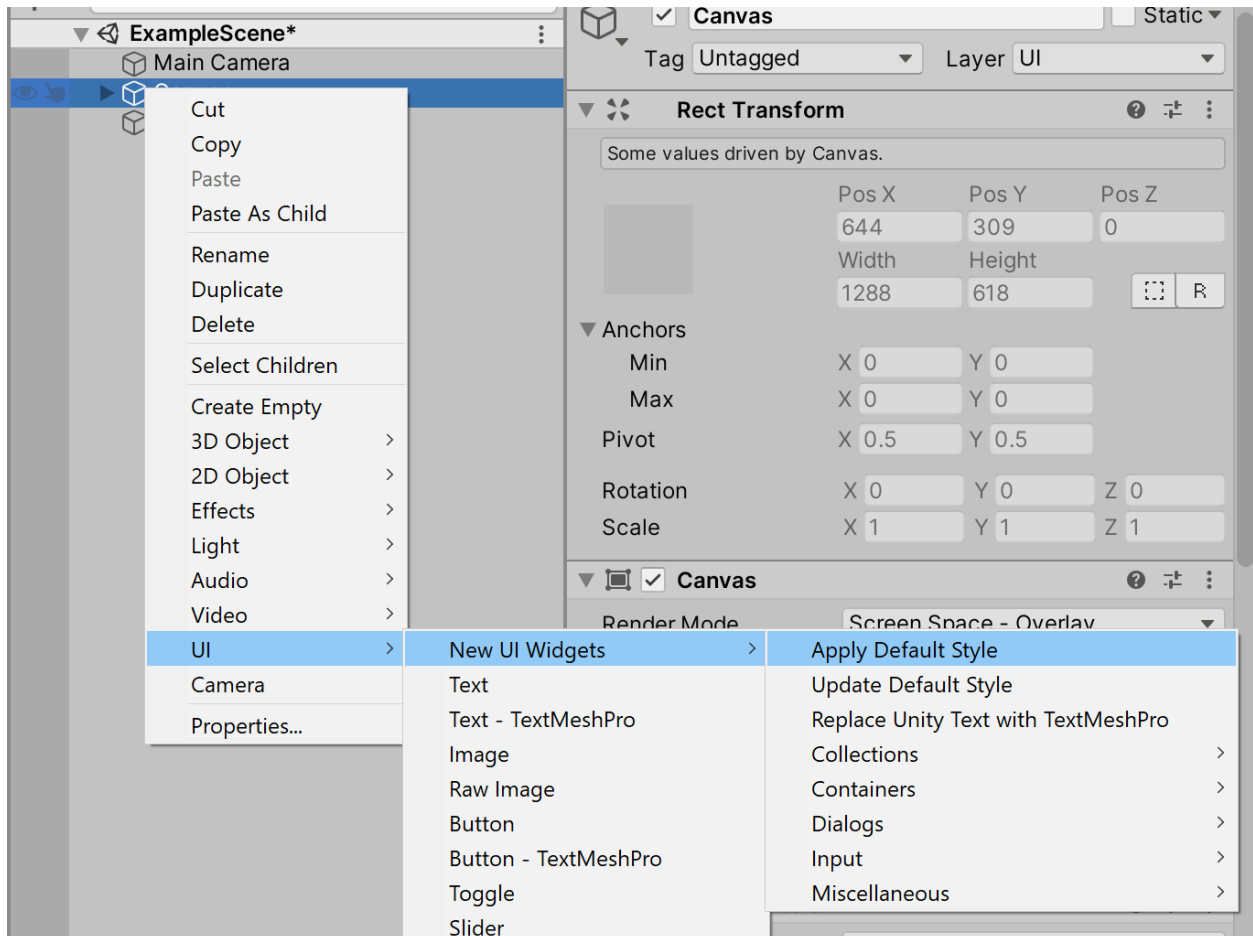

STYLES (SKINS)

Styles are like skins. They are used to change the **Color**, **Text**, and **Images** options of the widgets.

New UI Widgets contains two predefined styles: *Default* and *Blue*.

New style can be created with menu *Assets / Create / New UI Widgets / Style*.

You can set any style to use as default. Default style will be applied for the created widgets. Also, you can apply style for objects on the scene with *UI / New UI Widgets / Apply Default Style*.

You can change widgets settings and then save them to the style with *UI / New UI Widgets / Update Default Style*.

Styles has two modes: *fast* and *detailed* settings:

- *Fast* allow to quickly set settings for all widgets with *Apply Fast Settings* button.

- *Detailed* allow to tune settings for each widget type separately.

Note: For the style support for the nested widgets (for example, Switch or Spinner in the `ListView.DefaultItem`), you should add the `StyleSupportAny` component to the gameobject of the parent widget and specify nested widgets at the `Objects` field.

7.1 Style support for the custom widgets

You can add style support for your widgets with `IStylable` implementation.

```
using UIWidgets.Styles;
using UnityEngine;
using UnityEngine.UI;

[RequireComponent(typeof(Image))]
public class CustomPanel : MonoBehaviour, IStylable
{
    public virtual bool SetStyle(Style style)
    {
        style.Collections.MainBackground.ApplyTo(GetComponent<Image>());

        return true; // true if children gameobjects was processed; otherwise false.
    }

    public virtual bool GetStyle(Style style)
    {
        style.Collections.MainBackground.GetFrom(GetComponent<Image>());

        return true; // true if children gameobjects was processed; otherwise false.
    }
}
```

Note: Widgets created with *Widgets Generation* already have style support.

INTEGRATION

8.1 Cursor

`UICursor` class is a wrapper for the `Cursor.SetCursor()` to avoid conflicts between different widgets and components. For example *Resizable* component should not change the cursor if is controlled by the *Drag-and-Drop* component.

8.1.1 Fields

- `DefaultCursor Texture2D`
Default cursor.
- `DefaultCursorHotSpot Vector2`
Default cursor hot spot.

8.1.2 Methods

- `bool CanSet(Component owner)`
Is can the specified component set the cursor? `true` if cursor does not have an owner or the owner is the same.
- `Set(Component owner, Texture2D texture, Vector2 hotspot)`
Set the cursor.
The cursor will be changed only if `CanSet(owner)` returns `true`.
- `Reset(Component owner)`
Reset cursor to the default.

8.2 Localization

Most widgets have localization support, exceptions are:

- AutocompleteString
- ComboboxString
- ListViewString

Integration with custom localization system can done with `UIWidgets.l10n.Localization` class.

Example for the **I2 Localization**:

```
protected virtual void Start()
{
    Localization.GetTranslation = I2Translation;
    Localization.GetCountryCode = I2CountryCode; // used by Calendar and similar
    ↪widgets
    I2.Loc.LocalizationManager.OnLocalizeEvent += Localization.LocaleChanged;
}

public static string I2Translation(string input)
{
    var result = I2.Loc.LocalizationManager.GetTranslation(input);
    if (result == null)
    {
        return input;
    }

    return result;
}

public static string I2CountryCode()
{
    return I2.Loc.LocalizationManager.CurrentLanguageCode;
}
```

8.2.1 Dialog, Popup Localization

Dialog and Popup widgets requires enabled `LocalizationSupport` in `DialogInfoBase` component.

Formatted strings can be used with the `SetInfo` method:

```
public void Dialog()
{
    var actions = new DialogButton[]
    {
        new DialogButton("OK", DialogClose),
        new DialogButton("Cancel", DialogClose),
    };

    var instance = DialogTemplate.Clone();
    instance.DialogInfo.LocalizationSupport = true;
    instance.Show(
        buttons: actions,
        focusButton: "Close",
        modal: false,
```

(continues on next page)

(continued from previous page)

```

        onCancel: DialogClose);
        instance.SetInfo("Welcome, {0}", new object[] { "username", }, "Value 1: {0}\nValue 2: {1}", new object[] { "argument 1", "argument 2" });
    }

    bool DialogClose(int buttonIndex)
    {
        return true;
    }

```

8.2.2 Notify Localization

Notify widget requires enabled `LocalizationSupport` in `NotifyInfoBase` component.

Formatted strings can be used with the `SetMessage` method:

```

public void NotificationFormatted()
{
    var instance = NotificationTemplate.Clone();

    instance.NotifyInfo.LocalizationSupport = true;
    instance.Show(customHideDelay: 0f);
    instance.SetMessage("Welcome, {0} {1}", "FirstName", "LastName");
}

```

8.2.3 Generated Widgets

The easiest way to add localization support is to implement property returning a localized string in the data class. Widgets are automatically updated on locale changes.

```

public class Item
{
    public string LocalizedName
    {
        get
        {
            return I2.Loc.LocalizationManager.GetTranslation(Name);
        }
    }

    public string Name;
}

```

8.3 String Comparison and Culture

All widgets and components use `UtilitiesCompare` to compare strings. You can change comparison settings with the following fields:

- `UtilitiesCompare.Culture` `CultureInfo`
Culture used to compare strings, by default used `CultureInfo.InvariantCulture`.
- `UtilitiesCompare.OptionsCaseSensitive` `CompareOptions`
Options to compare strings with case sensitive.
- `UtilitiesCompare.OptionsCaseIgnore` `CompareOptions`
Options to compare strings with case ignore.

8.4 Timer and Animations

All widgets and components with animations have option `UnscaledTime`. The animation will be run with `Time.unscaledTime` if this option enabled.

You can also specify own timer instead of the default one. To do this, you need to set the following fields:

- `UtilitiesTime.GetTime` `Func<bool, float>`
Accept the time type, `true` if unscaled time. Returns the current time in seconds since the start of the game.
- `UtilitiesTime.GetDeltaTime` `Func<float>`
Accept the time type, `true` if unscaled time. Returns the current time in seconds since the last frame.

DATA BIND FOR UNITY SUPPORT

You can enable [Data Bind for Unity](#) support with *Project Settings... / New UI Widgets / DataBind support / Enable*. If **Data Bind for Unity** not installed option will not be available.

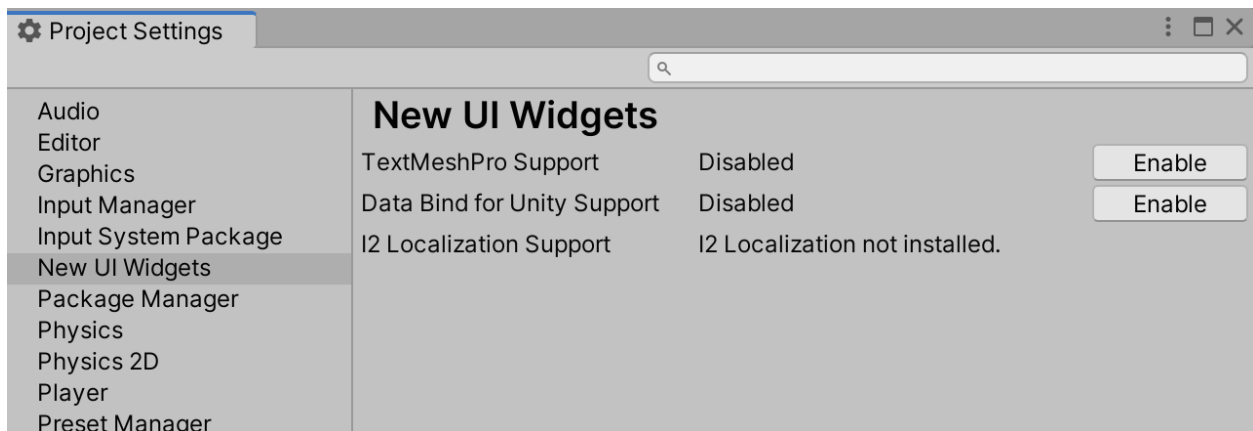

After enabling support:

- will be available **Data Bind** support for default widgets
- for generated widgets support can be added with context menu *Assets / New UI Widgets / Add Data Bind Support*

Disable support with *Project Settings... / New UI Widgets / DataBind Support / Disable*.

TEXTMESHPRO SUPPORT

You can enable **TextMeshPro** support with *Project Settings... / New UI Widgets / TextMeshPro Support / Enable*. If **TextMeshPro** not installed option will not be available.

After enabling support:

- widgets created with menu *UI / New UI Widgets /* will use **TextMeshPro** instead of the default **Text**
- generated widgets will be using TextMeshPro instead of the default Text

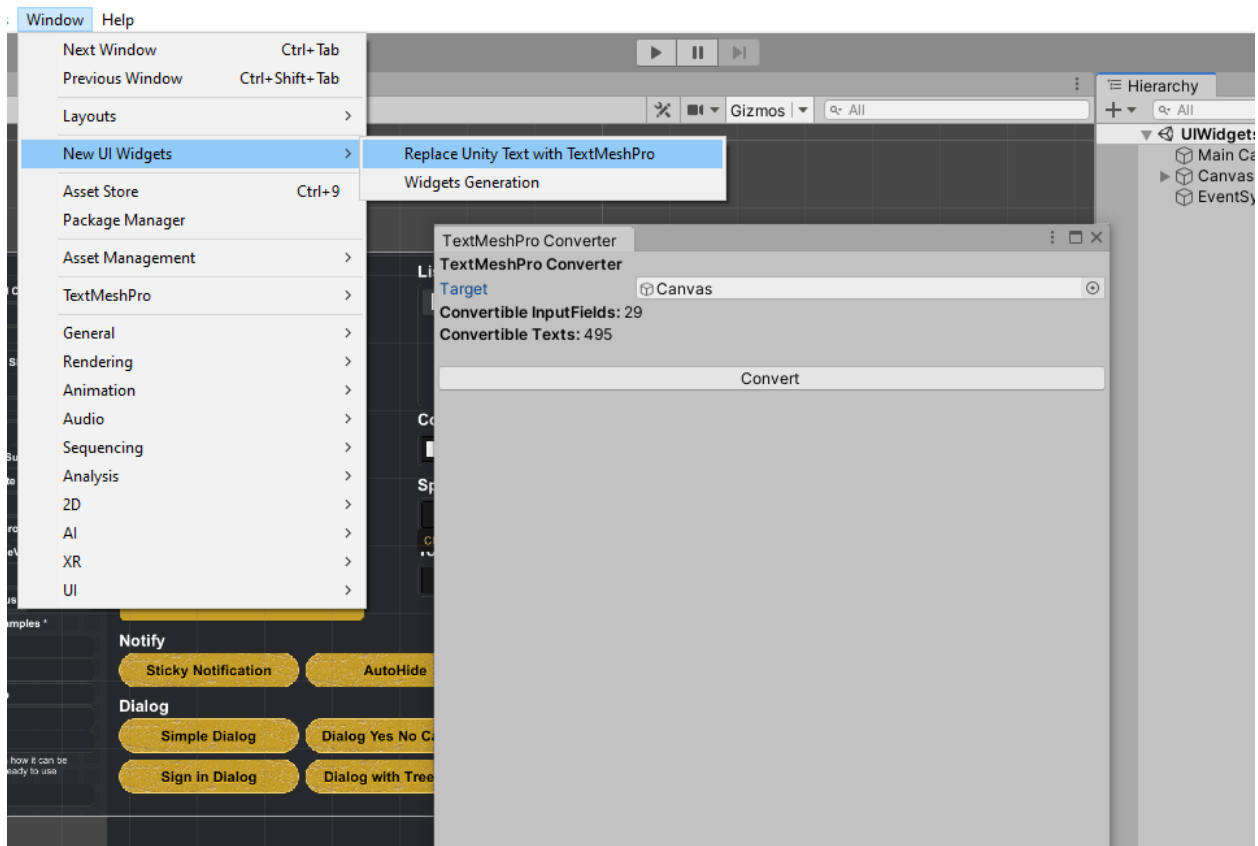

You can disable support the same way with *Project Settings... / New UI Widgets / TextMeshPro Support / Disable*.

10.1 Details

TextMeshPro support is enabled by adding `UIWIDGETS_TMPRO_SUPPORT` directive to the *Scripting Define Symbols* in the *Player Settings* and forced scripts recompilation.

Starting with version *1.12* TextMeshPro support is done with `TextAdapter` and `InputFieldAdapter` components. Those are adapters for the actual Unity and TextMeshPro components. This allows replacing Text components without any code changes.

TEXTMESHPRO CONVERTER

This is a tool to convert existing UI at the scene from default `Text` and `InputField` to the **TextMeshPro** equivalent components.

Converter available with the context menu *UI/New UI Widgets/Replace Unity Text with TextMeshPro* or with *Window/New UI Widgets/Replace Unity Text with TextMeshPro*.

Scripts references to `Text` and `InputField` components will be automatically replaced if type of reference is common base type like `Graphic` or `MonoBehaviour`; otherwise those components will not be converted.

Limitations:

- If you have any scripts with the serialized fields of type `Text` or `InputField` with specified components, then those components will not be converted.

```
[SerializeField]
Text Name; // cannot be converted

[SerializeField]
Graphic SecondName; // can be converted

[SerializeField]
TextAdapter ThirdName; // can be converted
```

Solutions:

- manually change type to the TextAdapter or InputFieldAdapter and add the corresponding component to the referenced GameObject
- modify code to automatically replace components with adapters

11.1 Modify Code to Adapters

Original script:

```
class SomeComponent : MonoBehaviour
{
    [SerializeField]
    Text Name;

    public void SomeMethod()
    {
        Name.text = "value";
    }
}
```

Modification:

```
class SomeComponent : MonoBehaviour, IUpgradeable
{
    [SerializeField]
    [System.Obsolete("Replaced with NameAdapter.")]
    Text Name;

    [SerializeField]
    TextAdapter NameAdapter;

    public void SomeMethod()
    {
        NameAdapter.text = "value";
    }

    public virtual void Upgrade()
    {
        Utilities.GetOrAddComponent(Name, ref NameAdapter);
    }

    #if UNITY_EDITOR
    protected virtual void OnValidate()
    {
        Upgrade();
    }
}
```

(continues on next page)

(continued from previous page)

```
}  
#endif  
}
```

Note: If you **undo** conversion you can see warnings like *Not found any Text/TextField/TextFieldExtended component*. This is happening because the newly added TMLite components were deleted and the old default components are not yet restored. In such cases, those warnings should be ignored.

I2 LOCALIZATION SUPPORT

You can enable **I2 Localization** support with *Project Settings... / New UI Widgets / I2 Localization Support / Enable*. If **I2 Localization** not installed option will not be available.

Localization Support Details

Disable support with *Project Settings... / New UI Widgets / I2 Localization Support / Disable*.

KNOWN PROBLEMS

- **Missing references or scripts**

Sometimes newly created widgets have missing references, or scripts are missing after the update.
Please try to import package again.

- **TextMeshPro support are disabled after the platform switch**

In some cases TextMeshPro support can be disabled after the platform switch because of the missing directive in *Scripting Define Symbols* for the current platform.
Like an upgrade to the new Unity version with the newly added platform and then switch to it.
You need to enable *TextMeshPro Support* again **without** saving the scene to avoid references lost.

- **TextMeshPro related errors after upgrade**

Package upgrade remove TMPro reference from assembly definitions.
Disable TMPro support and enabling it back solves the problem.

- **Newly created widgets are white**

It happens because of the empty style used as default and it automatically applied to newly created widgets.

Please open *New UI Widgets/Styles/UIWidgets Style Default* and check it settings (it should not be all white color or null), and set it as default.

If UIWidgets Style Default values are all white color or null, then try to import package again, sometimes import works incorrectly.

You can use “t:UIWidgets.Styles.Style” to find all styles and check which one is used by default.

- **Random errors of type **MissingReferenceException: The object of type ‘...’ has been destroyed but you are still trying to access it** in 2019.3 or later**

These errors can be related to *Enter Play Mode* settings with disabled *Reload Domain* and static variables in your code.

If *Reload Domain* is disabled, then static variables are not reset to default values on entering *Play Mode*.

You should add special code to reset static variables to solve the problem or enable *Reload Domain*.

Example:

```
static ObservableList<int> Numbers = new ObservableList<int>();

[RuntimeInitializeOnLoadMethod(RuntimeInitializeLoadType.
↳ SubsystemRegistration)]
protected static void StaticInit()
{
    Numbers = new ObservableList<int>();
}
```

CHANGELOG

15.1 Release 1.14.2

- added CircularSlider widget
- added SliderScale widget
- added TimeAnalog widget
- Accordion: added OnStartToggleAnimation and OnDataSourceChanged events
- Accordion: added AccordionHighlight component
- AutoComplete: added OnItemNotFound and OnCancelInput events
- AutoCombobox: added AddItems option (requires overridden Input2Item method)
- CenteredSlider: event OnValuesChange renamed to OnValueChanged
- Connectors: fixed bug related to “Scale With Screen Size”
- Connectors: added rectangular lines support
- Cursor: fixed flickering
- DatePicker and DateTimePicker: fixed initial date
- DirectoryTreeView: nested nodes are automatically loaded on expand from script
- DirectoryTreeView: added ExpandPath(), Path2Node(), Path2NearestNode(), RefreshDirectories() methods
- ListView: fixed highlight coloring on navigation
- ListView: fixed unstoppable auto scroll bug
- ListView Drop Support: added ReceiveOnlyEmptyNode option
- RangeSlider: event OnValuesChange renamed to OnValuesChanged
- Resizable: fixed position change
- ScrollBlock: added AllowIncrease and AllowDecrease fields
- Spinner: added SetValue() method to change value without OnChangeEvent invocation
- Styles: fixed error when creating a new style
- Styles: added PixelsPerUnitMultiplier property to the Image styles
- TreeGraph: small performance improvement
- TreeGraph: added LineThickness, LineType, LineMargin options
- TreeView: added ScrollWithIndent option

- Widgets Generation: improved localization support

15.2 Release 1.14.1

- EasyLayout: reduced memory allocations
- Widgets Generation: fixed type name error
- Widgets Generation: fixed missing reference

15.3 Release 1.14.0

- added localizations integration support
- added I2 Localization support
- added ContextMenu
- added Input System support
- added UtilitiesCompare class
- added ScrollRectFooter
- added AutoComboboxIcons prefab
- Dialog, Picker, Popup: added CloseButton property
- EasyLayout: added SetPreferredAndFitContainer option for the Children Size
- ListView: added Header property
- ListViewPaginator: added LoopedList support
- Notification: added “content” and “onReturn” parameters to the Show() method
- Style: fixed unchangeable settings after “Apply Fast Settings” use
- Style: added “Update Default Style” option, which is opposite of the “Apply Default Style”, it gets style settings from widgets and saves them to the current style
- Tabs: added CanSelectTab field to check if tab can be selected with a button click
- TabsCustom: TabButton class changed to the generic class TabButton<T>
- Widgets Generation: generated classes are partial now
- Widgets Generation: added AutoCombobox widget
- Utilities: most functions moved to the new Utilities* classes

15.4 Release 1.12.6

- ListViewItem: added ToggleOnClick and ToggleOnSubmit fields
- Widgets Generation fixes

15.5 Release 1.12.5

- added UIFlareGlobal shader: flare at global space
- added Ripple effect
- UIWidgets extensions methods moved to UIWidgets.Extensions namespace
- EasyLayout extensions methods moved to EasyLayoutNS.Extensions namespace
- shaders: replaced properties names with properties IDs
- Dialog: Show() arguments can later be changed with other methods: SetInfo(), SetButtons(), FocusButton(), SetPosition(), SetContent(), SetCanvas(), SetModal().
- EasyLayout: added GetElementPosition to get position in group
- InputFieldExtended: fixed bug with Value property (thanks to RickSaada1)
- ListView: added ItemsEvents field
- ListViewItem: now foreground and background graphics are serialized properties
- Notify: added buttons support with SetButtons(IList<DialogButton> buttons) method
- ProgressbarIndeterminate: fixed bar jump at the start
- TableHeader: fixed bug with ColumnToggle (thanks to jbw)
- UIFlare shaders: added flare delay property

15.6 Release 1.12.4

- Unity 4.6+ and Unity 5.x no more supported, now the oldest supported version is 2017.4
- fixed SendMessage warnings in Unity 2019.3 and later versions
- assembly definitions removed because all changes in .asmdef files are deleted on package update
- ListView: DefaultItem no more disabled by default in Editor mode
- ListViewDragSupport: added auto-scroll when the drag is near the border
- Notify: now you can create derived classes with NotificationCustom<T>
- TreeView Drag&Drop: now nodes can be reordered

15.7 Release 1.12.3

- added Pinchable component: drag, rotate, resize multi-touch support
- added ListViewAutoResize component: auto-resize ListView or TileView according to items counts until specified maximum size reached
- [Serializable] attribute of TreeNode<TItem> class not available for Unity 2020.1 and later versions
- ListView: added DisableScrollRect property to disable ScrollRect if ListView is not Interactable
- ListView and TreeView Drag&Drop: added Interactable support

15.8 Release 1.12.2

- added DistanceLines component
- added UI Cursor settings component
- Dialog: fixed buttons order
- DirectoryTreeView: fixed drives list
- ListViewPaginator, ScrollRectPaginator: fixed LastPageFullSize option
- ListView: now resize of disabled ListView processed correctly

15.9 Release 1.12.1

- added converter from Unity Text to TextMeshPro text
- added IUpgradeable interface to improve compatibility between versions
- added Groupable component
- added UIFlareTransparent shader
- added ResizableHandles component
- added Rotatable component
- added RotatableHandle component
- deleted a lot of lambda functions
- other lambda functions replaced with local functions
- renamed classes *Utilites to *Utilities
- improved performance with Asset Pipeline V2
- Combobox: fixed navigation support
- Draggable: added Target property to drag the specified target instead of self
- DragSupport: added AllowDrag field
- DropSupport: added ReceiveItems and ReceiveNodes fields for the base classes
- ListView: not selectable items are no more highlighted and navigated

- ListViewPaginator, ScrollRectPaginator: added LastPageFullSize option to change the last page size to full-page size
- Resizable: AllowResize renamed to Interactable
- Resizable: added resize type to change between size and scale
- Resizable: added Target property to resize the specified target instead of self
- ScrollRectEvents: RequiredMovement replaced with Thresholds to support separate thresholds for each pull direction
- Splitter: AllowResize renamed to Interactable
- Widgets Generation: added option to manually specify the type name if the type cannot be detected from the MonoScript

15.10 Release 1.11.2

- added TracksView to create custom schedule or time-line widgets
- added InputFieldAdapter to improve TextMesh Pro support
- added ListComponentPool
- added SplitButton
- Dialog: added RectTransform content and Action onClose parameters to Show(...) method
- Dialog: added OpenedDialogs property to get list of the opened dialog
- Dialog: DefaultButton replaced with ButtonsTemplates and DialogActions now has option to specify button index for the button template
- Dialog: type of the “buttons” parameter in the Show() method changed to IList<DialogButton>
- Dialog: added “Func<int, bool> onCancel” parameter to the Show() method, called with -1 parameter when dialog closed with top right close button
- DragListener: OnDragListener renamed to DragListener
- DragSupport: added optional DragHandle property, you can use it drag ListView items by specified handle instead of the whole item
- DragSupport: added StartDragEvent and EndDragEvent
- EasyLayout: added ElementsRotate and ElementsRotationStart for Ellipse layout
- ListView: improved navigation support
- ListView: added optional parameter minVisiblePart to IsVisible() method
- ListView: replaced old ListView with ListViewString
- ListView: added Virtualization setting to disable Virtualization
- ListViewDropSupport: added DropPosition parameter
- ListViewPaginator: now use ListView.ScrollToAnimatedPosition instead of the own animation
- Notify: fixed incorrect size and rotation of next notification if previous notification was closed during hide animation
- Resizable: added AllowResize property to enable/disable resize without removing component
- ScrollBlock: SetText() renamed to UpdateView()

- ScrollRectPaginator: ForceScrollOnPage replaced with ForcedPosition to support different positions

15.11 Release 1.11.1

- added AutocompleteCombobox
- ListView: fixed scrolling bug with variable size list types
- Notify: renamed AnimationRotate to AnimationRotateVertical, AnimationCollapse to AnimationCollapseVertical
- Notify: added animations AnimationRotateHorizontal, AnimationCollapseHorizontal, AnimationSlideRight, AnimationSlideLeft, AnimationSlideUp, AnimationSlideDown
- Notify: added configurable animations AnimationRotateBase, AnimationCollapseBase, AnimationSlideBase
- Resizable: added OnResize event
- Splitter: added OnResize event
- Tabs: added SelectedTabIndex property

15.12 Release 1.11.0

- added ScrollRectHeader (example of usage in Examples/ListView/ListViewHeader scene)
- added EasyLayoutEllipseScroll
- Combobox: added OnShowListView and OnHideListView events
- EasyLayout: added new layout type Ellipse
- EasyLayout: added new option ResetRotation
- ListView: added DestroyDefaultItemsCache, if enabled instances of the previous DefaultItem will be destroyed when replacing DefaultItem
- ListView: added new ListViewEllipse list type
- Scroller: renamed to ScrollBlock

15.13 Release 1.10.4

- added DateScroller, DateTimeScroller, DateTimeScrollerSeparate, TimeScroller widgets
- added EditorCondition attributes to use with MonoBehaviourConditional and UIBehaviourConditional
- added LayoutElementMax: allow to control the maximum preferred sizes of the LayoutGroup
- added UIFlare shader
- Combobox: added HideAfterItemToggle option
- DateTime: fixed init and time errors
- DatePicker: added DateChangeOnly option to allow to select date on change or on click
- EasyLayout: fixed FitContainer
- ListView: added null value support for the GraphicsForeground and GraphicsBackground properties

- ListView: added AllowColoring option
- ListView: added StateDefault(), StateSelected() and StateHighlighted() functions to the base default item class as addition to coloring functions
- ListView: added loading example with UIFlare shader use

15.14 Release 1.10.3

- added GroupedTileView example
- DragRedirect: improved support for the multiple redirects
- GroupedList: added ItemsPerBlock, EmptyGroupItem, EmptyItem properties for the TileView support
- EasyLayout: added Flex layout type
- EasyLayout: added Staggered layout type
- EasyLayout: renamed Stacking to MainAxis
- ListView: HighlightedBackgroundColor and HighlightedColor now applied automatically after changed
- ListView: fixed scrolling when List Type is fixed, ListScrollValue enabled and DefaultItem have Layout Group
- ListView: fixed rare bug for the ListView with items of the variable sizes.
- ListView: added missing fields in the Inspector window for the simple ListView
- ListView: added TileViewStaggered renderer
- ScrollRectPaginator: fixed displayed buttons at the start
- Style: fixed error when style created not in the folder or outside Assets folder
- TextMesh Pro support: improved support for the Unity 2019.1
- Tooltip: fixed displayed tooltip after parent gameobject was disabled (thanks to Gladyon)
- Widget Generation: fixed bug when type has only one field of the supported types

15.15 Release 1.10.2

- added ScrollbarMinSize component - allow set minimum size of the scrollbar handle
- added DragOneDirection component - it changes drag event to work only with one direction
- added LayoutDropIndicator component to use with TableHeader
- added Project Settings support for Unity 2018.3 and later
- Accordion: fixed problems when content size changed
- Accordion: added ForceOpen() and ForceClose() functions to open and close items without animation
- Accordion: added fields AnimationOpen, AnimationOpenFlexible, AnimationClose, AnimationCloseFlexible to change animations
- AudioPlayer: added setter for Source property
- LayoutSwitcher: added LayoutSelector field to control layout selection
- ListView: added CanSelect(index) and CanDeselect(index) fields

- ListView: added PrecalculateItemSizes, disabling this option increase performance with huge lists of items with variable sizes
- ListView: fixed LimitScrollValue when scroll to end
- ListView: fixed error when drag-and-drop position after the last item
- ObservableList: added INotifyPropertyChanged implementation
- ObservableList: added ObserveItems field
- ObservableList: now allowed null items
- RangeSlider: now correctly works when enabled or disabled inside layout groups
- ResizableHeader: renamed to TableHeader with related class
- TableHeader: no more required IResizableItem implementation for the ListView.DefaultItem
- TableHeader: added GetColumnsOrder() and SetColumnsOrder() functions
- TableHeader: added DropIndicator support
- Sidebar: added prefab and styles support
- Spinner: now use InputField component instead of the inheritance
- Spinner: added TextMesh Pro support
- Switch: SetStatus() now does not invoke events for other Switches in the same group
- TextMesh Pro support: widgets created with default menu “UI / New UI Widgets / ...” if support enabled
- TextMesh Pro support: removed menu “UI / UIWidgets with TextMesh Pro / ...”
- TextMesh Pro support: added menu “Edit / Project / Settings / New UI Widgets / Import TextMesh Pro support package” to import TPro prefabs after update to new version
- Widget Generation: added ScriptableObject support
- Widget Generation: added Data Bind support
- Other: fixes related using instantiate with inited complicated widgets
- Other: “UIWidgets” in the menu replaced with “New UI Widgets” to match with the package name
- Other: Time used with animations can be controlled with Utilities.GetTime field (You can use own Time manager instead of the default Time.time)

15.16 Release 1.10.1

- ListView: added ScrollTo(item) and ScrollToAnimated(item) functions
- Paginator: added StopAnimation() function
- ListViewPaginator: fixed direction problem
- TreeView: added ScrollTo(node) and ScrollToAnimated(node) functions
- TreeView: added FindNode() function
- TreeView: now ScrollTo(..) and ScrollToAnimated(...) correctly work with node indentation
- Widget Generation: added interface types support
- Widget Generation: fixed property support

15.17 Release 1.10.0

- Added styles support (Styles folder, new styles can be created from context menu “Create / UIWidget - Style”)
- Added widget generation (context menu “Create / UIWidget - Widgets” on file with item class definition)
- Added DateTime, Time24 and Time12 widgets
- Added DateTimePicker and TimePicker widgets
- Added ColorPickerRangeHSV widget
- Added ColorsList widget to display list of the selected colors, should be used with ColorPicker or ColorPicker-Range.
- Added “Data Bind for Unity” support (requires Unity 5.6 or later)
- Added base ListView Picker class for the custom ListView
- Added base TreeView Picker class for the custom TreeView
- Added base drop support class for the custom TreeView
- Added base drop support class for the custom TreeView node
- Added assembly definitions
- Improvement: Drag can be canceled with Cancel button
- Accordion: added AllItemsCanBeClosed option
- Autocomplete: added GetInputFieldText() function
- Calendar: added DateMin and DateMax properties
- Calendar: added currentDateAsDefault option
- ColorPicker: added Hex block
- ColorPicker: added new palette mode HSVCircle
- ColorPickerRange: DefaultShader replaced with DefaultShaderHorizontal and DefaultShaderVertical
- Connectors: now works correctly with “Screen Space - Camera”
- EasyLayout: reduced memory allocations
- EasyLayout: EasyLayout namespace renamed to EasyLayoutNS to avoid problems with Unity 2018.2 and later
- Interfaces: IItemWidth, IItemHeight, IListViewItemHeight, IListViewItemWidth not used anymore
- ListView: added CenterTheItems property
- ListView: added overridable functions CanBeSelected() and CanBeDeselected()
- ListView: added LoopedList option
- ListView: added Interactable option
- ListView: added IsTable option (required to valid stylization)
- ListView and TileView: ListViewCustomWidth, ListViewCustomHeight, TileViewCustom and TileViewCustomSize replaced with ListViewCustom with List Type option
- ListViewCustomWidth: TItem now does not require IItemWidth implementation
- ListViewCustomHeight: TItem now does not require IItemHeight implementation
- ListViewDropIndicator: added styles support

- ResizableHeader: fixed resize on touch devices
- Sidebar: added OnOpeningStarted and OnClosingStarted, called when appropriated animation started
- other: prefabs in “Sample Assets” folder replaced with scenes
- other: “Standart Assets” folder renamed to “Scripts”
- other: “Sample Assets” folder renamed to “Examples”
- other: removed ListViewGameObjects prefab
- other: removed outdated prefabs and sprites
- other: namespace “UIWidgetsSamples” renamed to “UIWidget.Examples”

15.18 Release 1.9.3

- Accordion: now works with content with dynamically change size
- ListView’s, TileView’s, TreeView’s: added GetItemPositionMiddle()
- ListView’s, TileView’s, TreeView’s: added ScrollToPosition()
- ListView’s, TileView’s, TreeView’s: added ScrollToPositionAnimated()
- ResizableHeader: added ColumnEnable, ColumnDisable and ColumnToggle
- ResizableHeader: fixed problem with adding columns
- ResizableHeader: improvements

15.19 Release 1.9.2

- added TreeViewCustomNodeDragSupport
- added ScrollButtons
- Autocomplete: fixed problem with resizing
- Autocomplete: added SearchDelay and MinLength options
- ColorPicker: fixed incorrect display in linear colorspace
- ColorPicker: now click on palette or image will change color
- Draggable: added Horizontal and Vertical options
- Draggable: added Restriction option
- ListViewCustomDragSupport: added DeleteAfterDrop parameter
- ListView’s, TileView’s, TreeView’s: added SetContentSizeFitter parameter
- ListView’s, TileView’s, TreeView’s: added Navigation parameter
- ListView’s, TileView’s, TreeView’s: added IsVisible() function to check if item is visible
- ListView’s, TileView’s, TreeView’s: added animated scrolling to items - ScrollToTime() and ScrollToSpeed()
- ListView’s, TileView’s, TreeView’s: Multiple renamed to MultipleSelect
- RangeSlider: added RangeSliderType; it’s allow or disable handles overlay
- Resizable: fixed error with allowed directions

- Sidebar: added new animation type ScaleDownAndPush
- Spinner: fixed input parsing problem
- Splitter: added Mode option, so you can specify left and right targets, instead using previous and next siblings in hierarchy
- TreeView: added serialization support with `TreeNode<T>.Serialize()` and `TreeNode<T>.Deserialize()`
- TreeView: fixed error when deleting selected node with disabled `DeselectCollapsedNodes`
- TreeView: added `ExpandParentNodes()` and `CollapseParentNodes()` functions
- TreeView's DefaultItem: Filler renamed to Indentation
- Dialog, Notify, Picker, Popup: `Template()` renamed to `Clone()`

15.20 Release 1.9.1

- Fixed CenteredSlider
- Fixed missing links in prefabs
- Fixed demo scene

15.21 Release 1.9.0

- Added `AudioPlayer`
- Added `Calendar`
- Added `DatePicker`
- Added `DirectoryTreeView`
- Added `FileDialog`
- Added `FileListView`
- Added `FolderDialog`
- Added `PickerBool` (can be used as Confirmation dialog with Yes/No/Cancel options)
- Accordion: added `ResizeMethod` property
- Accordion: protected `Items` property replaced with public `DataSource` property with type `ObservableList<T>`
- Accordion: added `DisableClosed` option
- `ColorPicker`: added Image palette, you can use it to get colors from custom `Texture2D`. The texture must have the Read/Write Enabled flag set in the import settings, otherwise this function will fail.
- `ColorPicker`: fixed bug with wrong axes with Hue palette
- Drag&Drop: added generic classes `ListViewCustomDragSupport` and `ListViewCustomDropSupport`, using them to add Drag&Drop functionality for own `ListView`'s become more easily. Check `ListViewIconsDragSupport` and `ListViewIconsDropSupport` as reference (ignore `TreeNode` region).
- `EasyLayout`: fixed “dirty” scene bug when using `FitContainer` or `ShrinkOnOverflow`
- `ListView`'s: `DataSource` can be safely used from other threads
- `ListView`'s: added `GroupedListView` sample

- ListView's: added `.Select(int index, bool raiseEvents)` function, you can use it to select items without raising events
- ListView's: added Owner field to ListViewItem (base class for any DefaultItem), it contains link to parent ListView
- ListView's: you can implement `IViewData<T>` to DefaultItem component class to avoid overriding `ListView.SetData()` function
- ListView's: added virtual properties `Graphic[] GraphicsForeground` and `Graphic[] GraphicsBackground` to ListViewItem, you can them to specify graphics for coloring, instead overriding coloring functions
- Resizable: mark events as used
- SlideBlock renamed to Sidebar
- Sidebar: added new animation types Overlay (default), Push, Uncover, ScaleDown, SlideAlong, SlideOut, Resize
- Sidebar: added `AnimateWithLayout` option for Resize animation, use it if you need more than one Sidebar with Resize on same Content object
- Spinner: added `AllowHold` option, so you can disable increasing/decreasing value during pointer hold
- Switch: added `.SetStatus(bool value)`, you can change state without raising corresponding events
- TileView's: added `TileViewCustomSize`
- Tooltip: added `UnscaledTime` option
- TreeNode: added `RootNode` property, used to check if nodes belong to same tree
- TreeView's and TreeNode: Nodes type change from `IObservableList<TreeNode<TItem>>` to `ObservableList<TreeNode<TItem>>`
- TreeView: added `SelectedNodes` property
- TreeView: added `DeselectCollapsedNodes` property, enabled by default
- TreeView: added `.Node2Index(TreeNode<TItem> node)` function
- TreeView: added `.SelectNode(TreeNode<TItem> node)` and `.SelectNodeWithSubnodes(TreeNode<TItem> node)` functions
- TreeViewDataSource: fixed incorrect branch bug (thanks to Heiko Berres)
- ProgressBar: added `SpeedType` option

15.22 Release 1.8.5

- InputFieldProxy: properties `onValueChange`, `onValueChanged`, `onEndEdit` type changed to `UnityEvent<string>` and get only.
- ListView: now is possible change DefaultItem in runtime
- ListViewItem: now works without ImageAdvanced
- SlideBlock: added `Modal` property, if enabled SlideBlock will be closed on click outside SlideBlock
- Tabs: added `EnableTab` and `DisableTab` functions

15.23 Release 1.8.4

- Added ColorPickerRange - allow selecting color from a range of two colors.
- Fixed Combobox bug.

15.24 Release 1.8.3

- Added SelectableHelper - allow controlling additional Graphic component according to selection state of current gameobject. So you can control button background color with Button component and Button text color with SelectableHelper
- Added ListViewInt
- Added Picker - base class for creating own pickers
- Added PickerInt, PickerString, PickerIcons
- Added LayoutSwitcher
- SpinnerFloat - added property Culture, specified how the number will be displayed and how input will be parsed
- SpinnerFloat - added field DecimalSeparators, along with decimal separator within Culture determine valid decimal separators for input (Warning: incompatible types with different Unity versions - Unity 4.x use string[] and Unity 5.x use char[])
- Spinner, SpinnerFloat - fixed overflow exception
- Resizable - added corners directions for resize
- ListView's - added FadeDuration for colors change

15.25 Release 1.8.2

- EasyLayout - added Shrink on Overflow option
- EasyLayout - added CompactConstraint and CompactConstraintCount options
- Splitter - fixed problem with using more than one splitter with the same container
- Tabs - added prefab for left side Tabs
- Added ScrollRectRestrictedDrag
- TextMeshPro support available with separate unitypackage
- Beta: Added Connectors. Add SingleConnector or MultipleConnector to empty gameobject

15.26 Release 1.8.0

- Added ScrollRectPaginator
- Added ListViewPaginator
- Added Autocomplete
- Added Popup
- TreeView: added TreeViewDataSource component with nodes editor
- ListView's: added ScrollTo()
- EasyLayout: reduced memory allocation
- EasyLayout: added row/column constraint for Grid layout
- Tabs: added DefaultTabName property
- TreeNode: added Path property - return list of parent nodes
- TreeViewComponent: added OnNodeExpand property with Rotate (rotate toggle) and ChangeSprite (change toggle sprite) values
- Notify and Dialog: added Template() method, now you can use notifyPrefab.Template().Show(...) instead Notify.Template("template name").Show(...)
- CenteredSlider: added ValueMin, ValueMax and UseValueLimits. If UseValueLimits enabled then ValueMin <= Value <= ValueMax
- Tabs: added TabButtonComponent, use derived class with overridden SetButtonData() to control how tab name will be displayed. For TabsIcons you can use TabIconButton.
- Dialog: added DialogButtonComponent, use derived class with overridden SetButtonName() to control how button name will be displayed.
- Dialog: added DialogInfoBase, use derived class with overridden SetInfo() to control how info will be displayed.
- ListView's, TileView: added DropIndicator for Drag-and-Drop
- TileView: added TileViewScrollRectFitter, ScrollRect will be resized to display whole number of items.

15.27 Release 1.7.4

- Added Switch
- Resizable: added KeepAspectRatio property
- Tabs: added SelectedTab property
- Tabs: added OnTabSelect event
- Known problems: Accordion with EasyLayout and Canvas.PixelPerfect enabled in Unity 5.3 cause error "Trying to add (Layout Rebuilder for) {ObjectName} (UnityEngine.RectTransform) for layout rebuild while we are already inside a layout rebuild loop. This is not supported." in some cases. Workaround - use Vertical or Horizontal Layout Group instead EasyLayout.

15.28 Release 1.7.2

- Fixed errors in WinStore builds.
- IDropSupport: added DropCanceled method.
- DragSupport: added DragPoint property (empty gameobject on cursor/touch position), you can use it to attach custom gameobject with information about draggable object.
- ListViewIconsDragSupport, TreeViewNodeDragSupport: show information about draggable object.
- Tabs: added Tabs with icons.

15.29 Release 1.7.0

- Added Drag and Drop support.
- ComboboxCustom and ComboboxIcons: Added Multiselect support.
- ResizableHeader: Added drag column support.
- TreeViewItem: Added Tag property.
- SlideBlock: Optional support for children ScrollRect.
- Accordion: Added Direction.
- Accordion: Added support Horizontal Layout Group and Vertical Layout Group (Content Objects should have LayoutElement component).
- ListViews: Added limited support Horizontal Layout Group and Vertical Layout Group (you cannot change ListView direction in runtime).
- ObservableList: Added events OnCollectionChange (raised when items added, removed or replaced) and OnCollectionItemChange (raised when item in collection raise OnChange or PropertyChanged events).
- ObservableList: Added Comparison, ResortOnCollectionChanged, ResortOnCollectionItemChanged properties.
- TreeNode: Added Parent property. Now you can remove node from tree using Node.Parent = null or move node to another subtree Node.Parent = AnotherNode.

15.30 Release 1.6.5

- Added Resizable.
- Added Splitter.
- Added SlideBlock.
- Added ScrollRectEvents component with PullUp, PullDown, PullLeft, PullRight events (use it for refresh or load more options).
- ListViewCustom: Removed properties SelectedComponent and SelectedComponents.
- ObservableList: Now you can disable items observe in constructor.
- ListViewItem: Added MovedToCache function, called when item moved to cache, you can use it to free used resources.

- Added Table sample (ListViewCustom + ResizableHeader + Tooltip).
- TileView sample - added Resizable for TileView and TileViewItems and toggle direction.
- Bug fixes.
- Optimization.

15.31 Release 1.6.0

- ColorPicker
- For ListView, ListViewIcons, ListViewCustom, ListViewCustomHeight, TileView added support for ObservableList
- Items property marked obsolete but can be used.
- Added optional sequence parameters for Notify - notifications can be showed one by one, not only all at once like before.
- For ListViewIcons items and TreeView nodes added field LocalizedName, so now can be easily added localization support.
- **EasyLayout - Control Width, Max Width, Control Height, Max Height replaced with “Children Width” and “Children Height”**
 - Do Nothing
 - Set Preferred - Set width/height to preferred, like Control Width/Height
 - Set Max from Preferred - Set width/height to maximum preferred width/height of items, like Max Width/Height
 - Fit Container - similar to “Child Force Expand” from Horizontal/Vertical Layout Group
- ListViewCustomHeight - implementation of IListViewItemHeight for components now optional, but you still can implement it for optimization purpose.

15.32 Release 1.5.0

- Added TileView
- Added TreeView
- Added ResizableHeader
- Direction option for ListView’s
- Value option for ListViewIcons items

15.33 Release 1.4.2

- Added ListViewCustomHeight (support items of variable heights)

15.34 Release 1.4.1

- Added CenteredSlider.

15.35 Release 1.4

- Added RangeSlider
- Added Accordion
- Bugfixes. Thanks to Nox from Purple Pwny Studios (<http://purplepwny.com>) for helping fix a mobile combobox bug.

15.36 Release 1.3

- Added ListViewIcons
- Added ComboboxIcons
- Added ListViewCustom
- Added ComboboxCustom

15.37 Release 1.2

- Added Dialog
- Added Draggable

15.38 Release 1.1

- Added Notify
- Added EasyLayout

15.39 Release 1.0

- Initial release
